REPORT  
OF THE  
STATE BOARD OF AGRICULTURE

---

LETTER OF TRANSMITTAL.

July 2, 1919.

To Honorable WILLIAM D. STEPHENS,  
*Governor of the State of California.*

DEAR SIR: We have the honor to submit herewith the Sixty-fifth Annual Report of the State Board of Agriculture.

The State Fair of 1918, as arranged and conducted by this Board, has the rather unique distinction of not losing money, being the only large fair in the United States that year which was able to operate successfully. Some of the largest state fairs in the country did not attempt to open at all, owing to conditions associated with the world war, which was at its crisis during the time usually taken up by the fairs in the several states. Other fairs were conducted to the best advantage under existing conditions and several incurred serious deficits. The California State Fair was an exception, and while it did not make as great a net profit as in some previous years, was fortunate in closing with all claims paid and a substantial balance in the contingent fund and a satisfactory balance in the state appropriation for aid.

This excellent condition was attained despite the fact that the new Agricultural Building was about half built and that it was impossible to exploit the soil products of the state in a satisfactory manner. One-half the floor space was made available by the use of temporary partitions and bulkheads, but the excellence of the display more than offset the difficulties of this occasion. In this connection no small share of the credit should be given to the United States Navy Department, which installed a most interesting exhibit from the Mare Island Navy Yard. This exhibit, particularly appropriate for the existing world conditions, was not only highly educational, but generally contributed to the exalted patriotic spirit in which the State Fair that year was conceived and conducted.

The Navy Department also authorized the attendance of a detail of men for a model camp, which with a splendid band added greatly to the success of this Fair. The attendant expenses, such as transportation

and incidentals, were paid by the State Board of Agriculture, and proved to be a profitable investment in the financial sense, while the value shown in the popular interest and patriotism engendered is beyond computation.

As heretofore stated, the attendance at all fairs in the country showed a serious falling off, doubtless due to the great number of our people actually called to service as well as those whose energies were taken up with auxiliary activities. Notwithstanding these handicaps, the attendance for the period of the Fair was well over 100,000, which is a cause for congratulation, not alone on the financial returns, but as an unmistakable proof of the loyalty of our citizens to the state and the nation in time of unprecedented stress, and as well as a convincing argument of the deep rooted wealth of material products and resources of the state.

With the new building ready for occupancy, and a prospect of large crops at remunerative prices, your Board feels that this next State Fair will tax the capacity of the plant, and will offer a display of the state's resources and products in every line of activity never excelled in the history of California.

Of the many duties intrusted to this Board, that of collecting and publishing statistics relating to the products and resources of this state is one of the first importance. Eight years ago the legislature made an appropriation of \$5,000 per annum for this purpose, a sum which is quite inadequate to cover this field of research in order to make it a comprehensive record of the increasing progress and prosperity of California. This report has been the only statistical volume showing the resources of the state that has been issued, and that the undertaking has been fully appreciated by the public is proved by the constant and growing demand for copies, the whole edition being exhausted last year within a few weeks of issue. Of the five thousand copies printed, considerably more than one-half are sent by request, the balance being distributed to federal and state departments, universities, colleges and libraries, and other demands for copies come from all parts of the world. In order to make the present system complete, a bureau of statistics with a state statistician is required, to gather statistical information on all subjects from the source of origin and issue it in the form of a year book, as is done in most other countries.

The past year has been an eventful one, the close of the recent war and the steps taken to meet the urgent demands for food and clothing from abroad, has resulted in great activities in the field of agriculture, and in most cases a considerable increase both in the quantities produced and values.

In the following pages there is a detailed summary of vacant public lands available for homesteads; school lands for lease and surplus railway lands for sale. The California Land Settlement Act, passed by the

recent session of the legislature, provided a sum of \$1,000,000 which will become available in August, and a bond issue of \$10,000,000, which will undoubtedly be endorsed at the election in November next year, for land for settlements for soldiers, on similar lines to the one established at Durham two years ago for farmers with small capital, which has proved remarkably successful. The Land Settlement Board hopes to find a suitable area and have it ready for settlers by next spring.

In dealing with our foreign trade all imports and exports given are for the United States, as it is impossible to segregate the proportion belonging to any state. In the case of most fruits both canned and dried, practically the whole of the exports come from this state.

The imports and exports of California ports or custom districts also show an enormous increase and give some idea of the value of our oversea trade. The value of imports and exports of merchandise from California ports, not including gold and silver, for the year 1918, amounted to the enormous sums of \$278,963,000 imports, and \$219,173,000 exports, compared with \$150,559,000 imports, and \$149,027,000 exports in 1917, which previously held the record. It must be remembered, however, that the greatest proportion of California products are shipped by rail to New York and other Atlantic shipping points.

The number of farm animals in California in 1918, compared with the previous year, show many variations. The number of horses fell from 468,000 in 1917 to 435,000, and the average farm price declined from \$98 to \$91. The number imported also decreased 12,500 to 5,100 and the horses exported from 278,600 to 84,700. Mules decreased from 66,000 to 63,000, but the average value rose from \$115 to \$125; the exports fell from 136,600 to 28,800. The number of milch cows fell off 36,000, or from 597,000 to 561,000, but the average farm price advanced from \$72.50 to \$79. "Other cattle" also lost 51,000, the number being 1,650,000 compared with 1,701,000 in 1917, but the average value also increased from \$42.10 to \$48.20. The imports of cattle declined from 439,000 to 374,000, but the exports increased from 13,000 to 18,000. The number of sheep increased from 2,776,000 to 2,943,000, and the average value from \$11.30 to \$12. The imports increased from 160,000 to 177,000, but the number exported declined from 58,000 to 7,000. Swine increased from 974,000 to 1,003,000 and the farm value increased from \$17.50 to \$18, but recently prices have advanced to the highest figures ever known. The number exported fell from 21,900 to 9,200.

In California farm crops, cereals, with the exception of corn and wheat, show a decrease in production compared with 1917. The production of barley was 34,320,000 bushels compared with 39,150,000

bushels, and the average price was \$1.15 a bushel or 5 cents less than the previous year. Buckwheat and rye are very little grown in the state. Corn increased from 2,400,000 bushels to 2,975,000 bushels and the average farm price rose from \$1.85 to \$1.93 per bushel; oats fell from 6,860,000 to 5,600,000 bushels, but the average farm price increased from 85 cents to 94 cents. Wheat produced 7,590,000 bushels compared with 7,425,000 bushels, and the average farm price was \$2.16 (the standard price was fixed by the government in 1917 at \$2.20 per bushel, at which it still remains). Potatoes fell from 15,225,000 to 12,870,000 bushels and the farm price declined from \$1.50 to \$1.20 per bushel; hay also fell off from 4,800,000 tons to 2,970,000 tons, but the average price increased from \$19.20 to \$20 per ton.

The export of cereals as a rule shows a decline compared with the previous three years, wheat falling from 259,642,000 bushels in 1915 to 34,118,000 in 1918, but the imports increased during the same period from 426,400 bushels to 28,177,000 bushels; barley exports amounted to 26,285,000 bushels, almost the same quantity as in 1915, but an increase of 10,000,000 bushels compared with 1917; buckwheat decreased from 413,000 bushels in 1915 to 5,500 in 1918; the exports of corn declined from 48,700,000 bushels in 1915 to 40,900,000 bushels in 1918, while the exports of oats increased during the same period from 96,800,000 bushels to 105,800,000 bushels; and rye and potatoes were stationary in 1915 and 1918, the quantity of the former being 12,000,000 bushels, and the latter 3,000,000.

The dried or dehydrated vegetable industry has made great advances during the war, and in 1918 a large quantity of about a dozen kinds, including potatoes, onions, carrots, cabbage, celery and rhubarb were packed in California. Other important crops which call for mention include beet sugar, the production of which decreased from 209,000 tons in 1917 to 122,000 tons in 1918, or the smallest output in the last ten years.

The production of hops has fallen heavily during the last two years; in 1916 there were 118,000 bales, in 1917, 85,000 bales, but in 1918 only about 45,000 bales; and prices last year fluctuated from 10 cents to 39 cents per pound.

The rice industry in California is of recent development, and continues to increase on a large scale. Grown as an experiment in 1912, the acreage has increased from 32,000 in 1915 to nearly 130,000 acres in 1918, all of which is in the Sacramento and San Joaquin valleys—Glenn, Colusa and Butte counties being the largest producers.

Cotton is another very important crop, which began on a commercial scale in Imperial Valley in 1909 with only 324 acres and now has 165,000 acres. In 1918 cotton, mostly of the Pima or Egyptian variety,

was planted with success in the San Joaquin and Sacramento valleys, principally in Kern, Fresno and Kings counties in the former, and Butte County in the latter valley, nearly 500 bales being ginned in the San Joaquin Valley. These successful results have lead to a much larger acreage being planted in 1919; at the present time 4,126 acres are growing in Fresno, 1,400 acres in Kings, and 1,200 in Kern counties. Of the above total of 6,726 acres, all but 285 acres are of the short staple variety, and the conditions are very promising.

Tobacco was raised successfully in 1912 and 1913, principally in Fresno County, but then fell off, as, owing to the price offered, it did not pay. A revival took place the last two years, and in 1918 tobacco was raised in commercial quantities in the San Joaquin Valley and in Yolo and Santa Clara counties, and a small quantity in Placer County. Much the largest quantity was produced in Fresno County, where some sixty growers planted about 500 acres which produced nearly 300,000 pounds, part of which realized between \$1 and \$1.50 per pound, but after the cessation of the war the demand fell off, with the result that it was difficult to find a market for the remainder.

California fruits show a great advance over all former years, most varieties showing a large increase, especially within the last five years. In the shipments of the leading varieties of deciduous fruits the number of carloads between the years 1914 and 1918 have increased as follows:

Apricots, from 382 to 441, cherries from 166 to 351, grapes 8,773 to 16,358, peaches 2,144 to 3,137, pears 2,725 to 4,570, and plums 1,907 to 2,483.

Citrus fruits alone fell off owing to very unfavorable weather, conditions being the lowest since the freeze of 1913. The wet and damp weather experienced in the early fall also caused much damage to the dried fruit crop, especially to prunes and raisins, so that the final figures show a considerable falling off compared with 1917, which latter year, however, had the largest pack on record. In nuts the crop was the largest ever gathered, almonds amounting to 9,000,000 pounds, and walnuts increasing from 30,000,000 pounds in 1917 to upwards of 38,000,000 pounds in 1918.

Attention is drawn in this report to a number of fruits and nuts which might be cultivated with advantage and profit in California but which have hitherto been more or less neglected. The avocado, for example, is coming to the front and making good progress. The cherimoyer has thus far been confined to the counties south of the Tehachapi, and there are several plantations in Los Angeles and Orange counties. The jujube or date plum was brought from China by the office of Foreign Seed and Plant Introduction of the United States Department of Agriculture. The climatic conditions of the interior

valleys are particularly favorable to its rapid growth, and if this fruit becomes an industry of any importance in California, we shall owe another debt of gratitude to this great department. The guava is another valuable fruit which should be encouraged, but it will only be grown to any extent in the southern counties. The loquat also can be grown successfully in California. It produces a delicious fruit which should cause it to be more widely planted than it has been.

Among nuts, the chestnut is a stately and magnificent tree which can be grown very successfully in the coast counties, where the conditions are exceptionally favorable for them. The pistachio is another valuable nut, and the trees do exceedingly well in the Sacramento and San Joaquin valleys. Pecans also grow well in the lower lands of the interior valleys, but the most favorable reports have come from the valleys of central and northern California.

In the foreign fruit trade, in which this state takes the lead, there have been considerable changes during the last four years. In the imports, Greek currants (or black Corinth grapes) which in 1913 amounted to 47,000,000 pounds, fell from 30,000,000 in 1915 to only 5,000,000 pounds in 1918. Figs declined from 20,000,000 pounds in 1915 to half that amount in 1918; olives from 3,600,000 gallons to 1,062,000. The imports of raisins have fallen steadily for the last ten years, from 12,000,000 in 1906 to 2,800,000 pounds in 1915, and dwindled to 840,000 in 1918. While the exports of all other dried fruits experienced a heavy decline in 1918, owing to war restrictions both in the United States and in Europe, raisins show a remarkable increase of from 24,800,000 pounds in 1915 to 54,000,000 in 1918. On the other hand the exports of dried apples during that period fell from 42,500,000 to 2,600,000; apricots from 23,700,000 to 5,200,000; peaches from 14,400,000 to 5,800,000; and prunes from 43,400,000 to 32,900,000 pounds.

The year 1919 promises to be a record year both in the production of crops, and high prices, and the farmers may look forward with confidence to a period of great prosperity.

GEORGE C. ROEDING,  
*President.*

CHAS. W. PAINE, *Secretary.*

## FINANCIAL STATEMENT.

July 1, 1918, to June 30, 1919.

## SUMMARY.

RECEIPTS.		DISBURSEMENTS.	
Balance on hand, state treasury-----	\$9,962 13	Salaries-----	\$9,892 63
Received from appropriation-----	51,300 00	Director's traveling expense-----	2,591 63
Concessions-----	6,634 98	Labor-----	29,485 20
Exhibit fees-----	5,442 80	Postage-----	1,730 38
Gate receipts-----	48,132 29	Traveling expense-----	1,080 65
Sacramento Chamber of Commerce-----	400 00	Light and power-----	1,907 63
Received on account of races-----	13,319 63	Telephone and telegraph-----	486 34
Sale of electrical energy-----	958 56	Stationery and printing-----	7,916 82
Sale of racing programs-----	466 86	Miscellaneous expense-----	5,443 73
Red Cross sales-----	2,529 00	Land lease-----	400 00
Stall rent-----	414 15	Refunds-----	648 67
Refunded expense-----	1,658 56	Premiums-----	24,716 09
Sale of butter and cheese-----	232 88	Attractions-----	10,357 22
From live stock associations for special prizes-----	852 25	Express, freight and cartage-----	1,014 87
Rent of tents-----	1,956 20	Red Cross from sales-----	2,529 00
Rent of barns, sheds, etc.-----	259 00	Races-----	21,378 95
Sale of junk and material-----	146 18	Material and supplies-----	4,741 71
Miscellaneous-----	11 60	Judge's fees-----	1,168 17

STATISTICAL SUMMARY  
OF THE  
Population and Agricultural  
Products  
OF  
CALIFORNIA  
BY  
GEORGE ROBERTSON  
Statistician.

---

---

NOTE.—Four Parts, XII to XV, inclusive, relating to Manufactures; Petroleum and Minerals; California Fisheries; Finance and Taxation, including Banks, Insurance, and Railroads, are omitted this year owing to lack of funds.

## PREFACE.

The law under which this report is prepared (Chapter 584, Statutes 1911) requires the annual collection, compilation, and distribution of statistics showing the yield of agricultural and other farm and industrial products of the state. These statistics are carried back for from ten to twenty years, but those who desire earlier information will find it in the first Statistical Report issued in 1911, where the statistics go back to the year 1850, when the state was first organized.

The statistics regarding population, area of farm lands, and the number of fruit trees, are compiled from the reports of the Bureau of the Census, which contain the only reliable figures obtained by actual count, and not by incomplete estimates, upon which little reliance can be placed. Few people realize the magnitude of such work, but as an example, the pay alone of the enumerators employed by the Census Bureau in 1910 in this state was upwards of \$151,000.

The great difficulty in obtaining reliable information from county authorities is their tendency to exaggerate and overestimate the productions and their value.

The numerous sources from which the statistics in this report are compiled are the most trustworthy that can be obtained and the information has been brought down to the latest possible date. It contains a condensed summary of hundreds of federal and state reports, and many other details obtained from a large number of correspondents from all parts of the state.

For the first time since 1911 the report this year is confined to agriculture and population, all other subjects being omitted in order to keep within the amount of the appropriation.

Acknowledgments and expressions of high appreciation are due to the United States Department of Agriculture, Bureau of the Census, Department of Commerce, United States Geological Survey, Commissioner of Indian Affairs, General Land Office, National Conservation Commission, the United States Reclamation Service, Colonel T. H. Rand, Chief of Engineers, War Department, the Commissioner of Internal Revenue, the District Forester, and Professor George H. Willson of the United States Weather Bureau of San Francisco.

From the state departments, valuable assistance has been received from the State Controller's Department, Department of Engineering, the Surveyor General, State Board of Forestry, the County Horticultural Commissioners, Motor Vehicle Department, State Dairy Bureau, and others.

GEORGE ROBERTSON,  
*Statistician.*

Sacramento, California, July 2, 1919.

# TABLE OF CONTENTS.

## Part I.

	PAGE
AREA, FARMS AND FARM LANDS. Vacant Public Lands; Homesteads; Indian Reservations; School Lands; Homesteads; Dry Farming; Vacant Public Lands; Number and Value of Farms; Size of Farms; Improved and Unimproved Farm Land; Mortgage Debt on Farms; Irrigation on Farms--	1

## Part II.

POPULATION OF CALIFORNIA. Population 1850-1917; Indians of California; Density of Population; Population of Municipalities of 8,000 and Upwards 1910-1917; Cities of 2,500 to 6,000 in 1910; Urban and Rural Population; Blind, Deaf and Dumb Population; Mortality Statistics; Marriages, Births and Deaths 1915-1917; Estimated Population of Cities and Towns, 1915; Population by Counties, 1850-1910; White and Colored Population; Foreign-born Population; Japanese Farmers, 1912-1916; Color and Nativity of Farmers-----	24
---	----

## Part III.

DOMESTIC ANIMALS. Cattle, Horses, Mules, Asses, Swine, Sheep and Goats; Number and Value of Farm Animals 1878-1918; Imports and Exports of Farm Animals; Horses and Mules by Counties; Horses, Cattle, Sheep and Lambs by Counties; Production of Wool by Counties; Goats and Goats Hair; Summary of Domestic Animals by Counties-----	44
--	----

## Part IV.

POULTRY, DAIRY PRODUCTS, BEES AND HONEY. Poultry Varieties: Turkeys, Ducks, Geese, Guinea Fowls; Ostriches; Eggs, Cheese and Butter; Bees, Honey and Wax; Butter and Cheese by Counties in 1910 and 1917-18; Production, 1850-1910; Condensed Milk, 1908-1918; Value of Dairy Products, 1917-1918; Production of Honey, 1908-1918; Bees, Beeswax and Honey by Counties, 1910; Imports and Exports of Honey and Beeswax, 1908-1918-----	75
--	----

## Part V.

FARM CROPS. Farm Crops, 1910: Cereals: Barley, Buckwheat, Corn, Oats, Rye, Wheat; Potatoes; Broom Corn; Hay; Sugar Beets; Cotton in Imperial Valley, 1909-18; Cotton in San Joaquin Valley, 1918; Silk in Butte County; Rice and Hops; Farm Crops for Twenty-five Years; Value of All Crops; Farm Crops by Counties-----	93
--	----

## Part VI.

VEGETABLES AND NURSERY PRODUCTS. Asparagus, Artichokes, Brussels Sprouts, Cabbages, Cucumbers, Cantaloupes, Cassabas and Watermelons, Lettuce, Garlic and Onions, Tomatoes, Rhubarb, Strawberries; Leading Vegetable Districts and Acreage; Vegetable Shipments in 1918; Canned Vegetables; Mustard Seed and Licorice; Ginseng; Flowers, Nursery Products and Seeds; Dried Vegetables; Cork, Tan Bark, and Tanning Extract-----	139
---	-----

## Part VII.

HORTICULTURE. FRUIT ORCHARDS AND VINEYARDS. Principal Counties in Orchard Fruits, Number of Trees and Vines; Apples, Apricots, Dates, Figs, Grapes, Olives, Oranges and Lemons, Raisins and Currants; Small Fruits; Canned and Dried Fruits; New Fruits: Avocado, Banana, Cherimoya, Guava, Jujube, Loquat; Nuts; Imports and Exports of Fruit, 1908-1918-----	157
--	-----

## Part VIII.

	PAGE
CALIFORNIA WINE INDUSTRY. Production of Wine and Brandy in Other States; Sweet Wines and Brandy; California Vineyards; Sparkling Wines; Grape Juice; Price of Wine Grapes; Vintages 1908-1918; Imports and Exports of Wine and Brandy; Production of Beer, 1913-1918 -----	229

## Part IX.

IRRIGATION. Farms and Irrigation; Description of Irrigation Enterprises; Source of Water Supply; Cost of Irrigation; Irrigated Crops, and Orchards; Irrigation Projects; Irrigation Districts; Private Irrigation Systems; Colorado River and Salton Sea; Lake Tahoe; Tulare and Other Lakes; Summary of Agricultural and Irrigated Areas; Irrigation from Underground Waters; California Rivers and Creeks; Acreage of Irrigated Farms by Counties; Main Ditches, Flowing and Pumped Wells..	240
---	-----

## Part X.

TRANSPORTATION BY WATER, RIVER TRAFFIC AND PUBLIC ROADS. The Sacramento River—Flood Control; Navigability of the Sacramento River; Traffic on the Sacramento, San Joaquin, Feather and Mokelumne Rivers; Number of Vessels; Registered Tonnage; Number of Passengers; Navigable Streams, Length and Depth at Low Water; Public Roads; Mileage of Roads by Counties; Increase of Motor Vehicles in United States; Number of Automobiles and Motorcycles in California by Counties, 1918; Number of Automobiles, 1914-1918; Total Receipts by Counties, 1918..	259
--	-----

## Part XI.

NATIONAL FORESTS. GAME IN CALIFORNIA. National Forests; Land Classification of Forests; Leases of Government Land; Grazing Permits; Forest Fires; Land Classification Projects; Predatory Animals Destroyed; Timber Sold and Cut; Free Use of Timber; Ownership of Forests by Counties-----	275
CALIFORNIA GAME. Wild Ducks, Geese, Quail, Grouse, Sage Hen, Doves and Pigeons; Pheasants, Wild Turkeys and Hungarian Partridges; Number of Deer Killed; Lion Bounties; Deer, Elk and Antelope; Bears-----	284

## COUNTY TABLES.

## Land and Farms.

TABLE	I. Vacant Public Land-----	9-10-11
	II. Number and Size of Farms by Counties-----	20-21
	III. Improved and Unimproved Land by Counties-----	22
	IV. Mortgage Debt on Farms by Counties-----	23

## Population.

TABLE	V. Marriages, Births and Deaths by Counties, 1915-1917..	31

Complete county statistics are only obtained by the U. S. Census Bureau every ten years, as it is a very large and costly undertaking.

## NOTES REGARDING CHANGES IN BOUNDARIES OF COUNTIES AND INCORPORATED PLACES

- Colusa*—Part taken to form Glenn in 1891.  
*Del Norte*—Part annexed to Siskiyou between 1880 and 1890.  
*Fresno*—Part taken to form Madera in 1893, and part annexed to Kings in 1909.  
*Glenn*—Organized from part of Colusa in 1891.  
*Humboldt*—Part of Klamath annexed in 1874.  
*Imperial*—Organized from part of San Diego in 1907.  
*Kings*—Organized from part of Tulare in 1893, and part of Fresno annexed in 1909.  
*Lake*—Part annexed to Napa in 1872.  
*Los Angeles*—Part taken to form Orange in 1889.  
*Madera*—Organized from part of Fresno in 1893.  
*Modoc*—Organized from part of Siskiyou in 1874.  
*Monterey*—Part taken to form San Benito in 1874.  
*Napa*—Part of Lake annexed in 1872.  
*Orange*—Organized from part of Los Angeles in 1889.  
*Riverside*—Organized from parts of San Bernardino and San Diego in 1893.  
*San Benito*—Organized from part of Monterey in 1874.  
*San Bernardino*—Part taken to form part of Riverside in 1893.  
*San Diego*—Part taken to form part of Riverside in 1893, part taken to form Imperial in 1907.  
*Santa Barbara*—Part taken to form Ventura in 1871.  
*Siskiyou*—Part taken to form Modoc in 1874; part of Klamath annexed in 1874, and part of Del Norte annexed between 1880 and 1890.  
*Tulare*—Part taken to form Kings in 1893.  
*Ventura*—Organized from part of Santa Barbara in 1871.

---

## INCORPORATED PLACES.

- Bakersfield*—Part of township 3 (Kern City) annexed in 1909.  
*Berkeley*—Part of Oakland township annexed in 1906 and 1908.  
*Fresno*—Part of township 3 annexed in 1910.  
*Los Angeles*—Parts of Ballona, Burbank, Cahuenga, and San Antonio townships annexed between 1890 and 1900; part of Ballona township annexed in 1906; part of Wilmington township (including San Pedro City) annexed in 1909, and parts of Burbank and Cahuenga townships annexed in 1910.  
*Oakland*—Parts of Brooklyn and Oakland townships annexed in 1909.  
*Ontario*—Parts of Ontario township annexed in 1901.  
*Pasadena*—Parts of Pasadena township annexed in 1904 and 1906.  
*San Leandro*—Part of Brooklyn township annexed in 1909.

## COUNTIES AND COUNTY SEATS, ACREAGE AND POPULATION.

Counties	County seat	Elevation, county seats	Approximate county land area, acreage	Number of acres of land assessed	Grand total of all property
Alameda	Oakland	36	468,480	460,169	\$299,763,570 00
Alpine	Markleville	*	496,640	46,314	740,307 00

# THE STATE OF CALIFORNIA.

(Date of organization as a Territory, March 1, 1847; as a State, September 9, 1850.)

## PART I.

### AREA, FARMS AND FARM LANDS.

**Vacant Public Lands; Homesteads; Indian Reservations; School Lands; Homesteads; Dry Farming; Vacant Public Lands; Number and Value of Farms; Size of Farms; Improved and Unimproved Farm Land; Mortgage Debt on Farms; Irrigation on Farms.**

The state of California is about 780 miles in length; its breadth varies from 150 to 350 miles and its total area is 158,297 square miles, of which 2,645 are water surface. The coast line is more than 1,000 miles long. In size it ranks second among the states of the Union, Texas being the only one to exceed it. It is almost as large in total area of land and water as the following seven Eastern states combined:

State	Square miles
New York -----	49,204
Ohio -----	41,040
Maine -----	33,040
Vermont -----	9,564
New Hampshire -----	9,341
Massachusetts -----	8,266
New Jersey -----	8,224
Total -----	158,679
California -----	158,297

California has the highest and lowest land of the United States, the greatest variety of temperature and rainfall, and of products of the soil. The spread of irrigation and of intensive cultivation, and the increase of small farms during the last twenty years, have made California what it is today.

Agriculture had its beginning in wheat raising on great ranches, from fifty to several hundred thousand acres in extent; then deciduous orchard fruits and semitropical citrus fruits, successively.

Both the Spanish and Mexican governments made large grants of land to encourage settlement. These were used as cattle ranches exclusively, up to the time of the American occupation, and the exports consisted entirely of hides and tallow. These grants covered the valleys of the state to a large extent, and later were recognized and patented by the United States Government. About 500 of these claims, covering nearly nine million acres, were found to be valid:

Of the fifty-eight counties into which the state is now divided, the first twenty-seven were organized on February 18, 1850; ten years later the number had increased to forty-two. In 1872, Ventura became the fiftieth county, and Imperial, the latest addition, was formed in 1907.

The land area of the state is about 99,898,880 acres, a great part of which is rough, mountainous country and desert, roughly classified as follows:

Land surface		Water surface		Total	
Square miles	Acres	Square miles	Acres	Square miles	Acres
155,652	99,898,880	2,645	1,692,800	158,297	101,310,080

Approximately one-half of the land surface of the state is under the control of the federal government, including 18,938,909 acres in the national forests, on June 30, 1918. The areas designated as "National Forests" were formerly called "Forest Reserves," but the title was changed by act of congress of March 4, 1907. Up to June 30, 1917, the amount of swamp land patented to the state was 2,115,416 acres.

#### The Indians of California.

The Indians were prominent in early California history, but their progress towards their present insignificance began far back in the Spanish period. It proceeded much more rapidly after the restraining influence of the Missions was removed, leaving them free to revert to savagery; and the downward progress of the race was fearfully accelerated during the mining period, when they were ambushed, deprived, and in large numbers killed. There have been no Indian wars in California's annals, but many butcheries.

They are of at least fourteen different linguistic stocks. The government, in dealing with the California tribes, did not follow the policy pursued with the wild Indians of the plains, and no treaties were made with them and no remuneration paid for lands acquired by white settlers.

#### Indian Reservations.

Large numbers are located on twenty-six reservations, namely: Hoopa Valley, Round Valley, Tule River, Yuma, and twenty-two Mission reservations.

Most of the Mission Indians are located on small reservations scattered over Riverside and San Diego counties. Among them are found representatives of a number of different tribes.

Round Valley reservation, embracing an area of 59 square miles, is situated in Mendocino County, and the remnants of nine small tribes are located here, who might well be classed as civilized. Tule River reservation in Tulare County contains 76 square miles, and contains the remainder of the once powerful Tule tribe. The Yuma reservation contains an area of  $71\frac{1}{2}$  square miles, the Indians living on this section being the most primitive of the California tribes in manners and customs.

The prejudice against the Indians is being dispelled, for the reason that those who have been obliged to depend upon them to do farm work in many localities have discovered that the Indians as laborers are dependable, reliant, efficient.

The problem of labor in California being one of increasing importance, owing to the development of various activities and industries, it is true that the Indians will be called upon more and more for industrial service, until this demand becomes permanent.

With this point in view, it must be gratifying to everyone to know that the government maintains a large number of fine schools in the state for educating and training young Indians, and in several schools for giving them instruction along specific vocational lines. The younger Indians who are attending school realize that the old order of things is passing, and that the Indians will in a few years become an important part of a great state.

The principal industries other than farming and stock raising engaged in by Indians are basket making, blanket weaving, bead work, pottery and wood cutting. The value of crops raised in 1918 was \$453,552, stock sold \$65,965, native industries—weaving, basketry, \$57,637, and wages earned \$454,335. The total value of individual and tribal property including lands and timber in 1918 amounted to \$10,812,937, all items showing a large increase over the year 1917.

The largest allotments are 42,106 acres in the Round Valley reservation; 29,091, in the Hoopa Valley reservation, and 8,010 acres in the Fort Yuma reservation. The allotments on June 30, 1918, number 2,593, the acreage amounting to 82,172 acres allotted, 434,866 unallotted, or a total of 517,038 acres.

Indians are located in 10 of the 58 counties of the state, viz.: Amador, Humboldt, Inyo, Mendocino, Modoc, Plumas, Riverside, San Diego, Santa Barbara, and Tulare.

Indian Reservations, Years Ending June 30, 1890-1918.  
Area—Unallotted.

## National Parks and National Monuments.

There are four national parks and six national monuments in California. The former were created by acts of congress and the latter by proclamations of the President. The name of each, with the date of creation and present area, is shown by the following table:

Name	Date created	Area, acres
Yosemite National Park*-----	Oct. 1, 1890	719,622.40
Sequoia National Park†-----	Sept. 25, 1890	161,597.00
General Grant National Park-----	Oct. 1, 1890	2,536.00
Lassen Volcanic National Park-----	Aug. 9, 1916	79,220.00
Devil Postpile National Monument-----	July 6, 1911	800.00
Lassen Peak National Monument‡-----	May 6, 1907	1,280.00
Cinder Cone National Monument-----	May 6, 1907	5,120.00
Muir Woods National Monument-----	Jan. 9, 1908	295.00
Pinnacles National Monument-----	Jan. 16, 1908	2,080.00
Cabrillo National Monument-----	Oct. 14, 1913	21,910 sq. ft.

\*Boundary changed by Congress in 1905 and again in 1906.

†Boundary changed by Congress October 1, 1890.

‡Within Lassen Volcanic National Park.

## LAND REGISTRATION IN CALIFORNIA.

The Torrens law was first adopted in this state in 1897, California being the first state in the Union to pass a land registration act.

The law was designed to simplify the transfer of real estate and to give the property owners a quick and inexpensive means of transfer after the land has once been bought under the system. The act adopted in 1897 was unsatisfactory, only a few titles being taken out thereunder; the act of 1914 being intended to remedy the defects in the old law.

The initial proceedings to registration are similar to an ordinary suit to quiet title. After a decree of court is obtained a certificate is issued by the registrar of deeds, which certificate is conclusive evidence that the party named thereupon is the owner of the property subject only to such liens or objections as may appear on the certificate. Subsequent transfers are made by deed or by assignment of the certificate after which the registrar of titles issues a new certificate to the new owner.

Torrens titles are protected by state insurance. When the land is first brought under the act the owner pays into the assurance fund one-tenth of one per cent of the assessed value of the land, including permanent improvements thereon as the same were valued for county taxation the last time said land and permanent improvements or either thereof were assessed. All subsequent purchasers are insured without further cost.

Title to property under the Torrens Act can not be questioned after it has once passed into the hands of an innocent third party for value, but a party sustaining injury through the workings of the act can recover the value of the property from the assurance fund in the hands of the State Treasurer. On August 1, 1918, the assurance fund contained \$9,132.68. On the same date ten counties had adopted this system of registration: Humboldt, Imperial, Kern, Los Angeles, Orange, Riverside, San Bernardino, San Diego, San Francisco and Tulare counties.

## SALE OF SCHOOL LANDS.

Certain school lands if suitable for cultivation is subject to sale to actual settlers thereon, pursuant to the provisions of chapter 395, Statutes of California, 1915. Large areas of land are also available to lease.

Forms for application to lease state lands from the state of California can be obtained from the State Surveyor General, Sacramento, California. A filing fee of \$5 must accompany the application to lease state lands, together with a letter from the applicant stating the maximum amount per acre that the applicant is willing to pay as the annual rental for the land desired to be leased, which letter from the applicant will be submitted to the State Board of Control when the Surveyor General determines the annual rental per acre of the land and submits same to the State Board of Control for approval, in accordance with the provisions of section 2 of chapter 493, statutes of California, 1917.

Anyone desiring to lease any of these lands can obtain free, a copy of the law governing the leasing of said lands and a list of the different tracts of state land subject to lease in the county in which he is interested together with a form for application to lease, on application to Surveyor General.

All money derived from the leasing of these lands goes directly to the support of the public schools.

The state has sold all of its swamp and overflowed land except a few isolated tracts which can be found only by an extensive search of the records of the State Land Office.

For the year ending August 1, 1918, 4,088.64 acres of school land suitable for cultivation were sold to twenty-five actual settlers at prices fixed by the State Board of Control and the Surveyor General, ranging from \$2.50 to \$30.00 per acre, as compared with the price of \$1.25 per acre received for the great majority of the school lands sold to speculators under the early methods of selling school lands.

On June 30, 1918, there were 813,573 acres of vacant school land unsold in California, 121,751 acres thereof being situated within national forests created by the federal government and being withheld from sale by the provisions of section 3408b of the Political Code. The remaining 691,822 acres are subject to sale.

Lands suitable for cultivation which are very limited in area can be sold to actual settlers at a price to be fixed by the State Board of Control and the Surveyor General. Lands suitable for cultivation are sold at public auction to the highest bidder, but owing to conditions brought about by the war it was deemed advisable this year to postpone any sales until normal conditions were restored and prices commensurate therewith prevail.

List Showing Area of Vacant School Lands for Lease, December, 1917.†

## VACANT PUBLIC LANDS.

Practically all the vacant public land which is easily accessible has been already taken up, the areas now remaining being situated at a considerable distance from towns or villages, or in remote mountain valleys.

Before entry, personal inspection of the lands should be made to ascertain if they are suitable, and when the applicant is satisfied on this

point, entry can be made at the local land office. Information regarding vacant land in any district can be obtained on application to the register and receiver of the proper local land office, who will give full information regarding vacant land and the steps necessary to be taken in making entry. All vacant unappropriated public lands, nonmineral and nonsaline in character, are subject to entry under the homestead laws.

#### Homesteads, 160 to 320 Acres.

A homestead entry is limited to 160 acres. An enlarged homestead may contain 320 acres, provided the land is nonmineral, nontimbered, and nonirrigable. These terms mean land which, as a rule, lacks sufficient rainfall to produce agricultural crops without the necessity of resorting to unusual methods of cultivation, such as the system commonly known as "dry farming," and for which there is no known source of water supply from which such land may be successfully irrigated at a reasonable cost.

#### Stock Raising Lands (640 Acres).

These lands are those the surface of which is chiefly valuable for grazing and raising forage crops, which do not contain merchantable timber, are not susceptible of irrigation from any known source of water supply, and are of such character that 640 acres are reasonably required to support a family. The classification will be made, so far as practicable, to exclude lands that are not chiefly valuable for grazing and raising forage crops, either because too valuable for such use or too poor for such use. Lands which are capable of producing valuable crops of grain or other food cereal or fruit are not subject to designation, being, if otherwise subject to entry, disposable under the 160-acres or 320-acres homestead law, according to their character. Lands of such arid or poor character that they are worthless or fit only for occasional grazing in connection with large areas of other land are not subject to designation and entry. No tract may be designated which contains a water hole or other body of water, needed or used by the public for watering purposes, nor lands included in national forests.

Any person who desires to obtain a homestead must be a citizen of the United States or have declared his intention to become such, over the age of 21 years, and not the proprietor of more than 160 acres of land in the United States.

Six months from the date of filing is allowed to establish a bona fide residence on the homestead, which from that time to the date of the final proof must be the home of the applicant to the exclusion of a home elsewhere.

Under the new homestead law the entryman must, within six months after filing, establish actual residence on the land, build a habitable house and actually live on the land to make it a home for seven months out of each year for three years, and cultivate at least one-eighth of the land.

Residence can not be maintained by occasional visits to the land while the actual home is elsewhere. The homesteader must manifest entire good faith in occupying the land as a permanent home to the exclusion of one elsewhere.

The settler must show that he has cultivated one-sixteenth of the area of the land, beginning with the second year from date of entry, and one-eighth of the area the following year and until proof is submitted. A mere breaking of the soil will not meet the terms of the law, but such breaking and stirring of the soil must be accompanied by planting or the sowing of seed and tillage for crops other than native grasses. If his proof is satisfactory, and the government, after investigation, finds that he has complied with the law in good faith, his entry will be clear-listed, and in due time he will receive a patent for the land.

The homesteader may, before three years, by paying the purchase price of the land, at the rate of \$1.25 per acre if it is situate outside the limits of a railroad grant, and at the rate of \$2.50 per acre if it is within the granted limits of a railroad, offer what is known as commutation proof, which must show at least fourteen months of actual and substantially continuous residence, with bona fide cultivation and improvement of the land, immediately prior to his application to make such proof.

The United States Land Office fees and commissions for filing on 160 acres are \$16.00, if the land is outside of the limits of a railroad grant; if inside the granted limits of a railroad they would amount to \$22.00. The fees and commissions are computed upon the acreage of the tract entered.

The final proof commissions on 160 acres would be \$6.00, if the land is outside a railroad grant, and \$12.00 if inside the limits of a grant. Added to this are fees ranging from \$2.00 to \$4.00 based upon the number of words of testimony in the proof. There are no other fees or commissions required of a homesteader by the government.

Those who commute their homesteads must pay the purchase price of the land in addition to the above fees, except the final proof commissions, which are not required on commuted homesteads.

A township diagram, showing only entered lands in any township, can be procured by sending \$1.00 to the register and receiver of the land office of that district. The diagram required should be specified by township and range number.

While the following figures may not be absolutely correct, owing to liability to error in a work of such magnitude and to the necessity of making estimates of unsurveyed lands, it is believed that they afford a close approximation to the actual areas. The statement is intended to inform correspondents and the general public as to whether there is much or little public land in the several land districts therein and in particular counties and localities.

In some counties only a few acres are reported as vacant, and in seven all the land has already been taken up. Neither the General Land Office nor the local land officers can furnish information as to the location of such tracts, but such information may be obtained from the records of the local land offices which, when not in official use, are open to inspection by prospective home seekers or their agents. There are a number of detailed regulations issued regarding enlarged homesteads, stock-raising homesteads, soldiers' additional rights, military service by homesteaders, and leave of absence for the purpose of performing farm labor, copies of which can be obtained from the General Land Office, Washington.

A regulation has recently been issued increasing the area of a home-  
stead from 160 to 320 acres on land having no water supply, in Los  
Angeles, Imperial, San Diego and Riverside counties.

The total acreage of land unappropriated and unreserved on July 1,  
1918, was 20,529,034 acres, of which 15,900,150 acres had been surveyed  
and 4,628,884 unsurveyed.

TABLE I.

Statement Showing the Area of Land in California Unappropriated and Unreserved  
on July 1, 1918.

Land district and county	Area in acres			Character
	Surveyed	Un- surveyed	Total	
<b>El Centro—</b>

The following seven counties have no unappropriated or unreserved public lands: Marin, Sacramento, San Francisco, San Joaquin, San Mateo, Santa Cruz, Sutter.

#### Dry Farming.

The United States Government is not only interested in settling its irrigated lands, but also in developing all parts of its territory, and for this reason the various bureaus of the Department of Agriculture have been studying the soils of the West and also scouring the world to find crops suited for these regions. Dry farming is meeting with a certain amount of success in various parts of the country, and the combined efforts of all of these endeavors to make fertile and productive these lands will result in an era of unprecedented prosperity for the entire West.

#### Reclamation Projects.

If the entry is of a farm unit under the Reclamation Act it may be as small as 10 acres, if the lands are suitable for fruit raising or similar purposes, but in most cases units are fixed at from 40 to 80 acres each.

#### California Land Settlement Acts.

A tract now known as the State Land Settlement was purchased at Durham, Butte County, and transferred to the state on May 7, 1918. The available land was offered for settlement under the following conditions: Settlers were to pay 5 per cent of the cost of the land and 40 per cent of the cost of the improvements at the time of purchase, the remainder of the purchase price to extend over a period of 20 years, with interest at the rate of 5 per cent per annum. Payments are principal and interest to be made semiannually in accord with the amortization table of the Federal Farm Loan Board, the settler to receive a contract of purchase which sets forth the conditions of payment and the obligation he assumed, deed to the land to be given when payments were completed.

The ditching and leveling of land were treated as permanent improvements and the settler paid 40 per cent of the cost. Plowing and seeding of land to grain was regarded as temporary improvements and the settler paid the cost in cash.

Settlers who intended to have live stock were required to form a cooperative stock breeders' association and agree to have nothing but pure bred sires in the settlement, the board agreeing to extend aid in the purchase of these if this proved necessary.

No settler was regarded as eligible to purchase a farm who had less than \$1,500 capital, or a working equipment of implements or live stock the equivalent of such capital, and settlers were advised that \$2,500 to \$3,000 was a better sum for those contemplating the purchase of a farm allotment, having 40 acres or more.

There were no requirements as to capital on the part of farm laborers. The savings from wages ought to meet the payments, as these would be less than the rental of a house in town.

The legislature in 1919 provided \$1,000,000 to be used in establishing a colony similar to the one at Durham, where the farms are all sold, and provided for a bond issue of \$10,000,000 for soldier settlements.

The \$1,000,000 becomes available in August, and the Land Settlement Board hopes to find a suitable area, and have it ready for settlers next spring.\*

#### FARMS AND FARM LANDS IN 1910.

California ranks second in land area and twelfth in population among the states of continental United States. The soils vary from heavy clay like "adobe" soils to sandy and gravelly loams.

Over one-fourth (28 per cent) of the land area of the state is in farms. The average value of farm land per acre for the state as a whole is \$47.16. Between 1900 and 1910 there was an increase of 21.6 per cent in the number of farms as compared with an increase of 60.1 per cent in the population.

During the same period farm property, which includes land, buildings, implements and machinery, and live stock (domestic animals, poultry and bees), increased in value \$818,167,000, or 102.7 per cent.

The average value of a fully equipped farm is \$18,308, an increase of \$7,328 as compared with the average in 1900. The average value per acre of land alone rose from \$21.87 in 1900 to \$47.16 in 1910.

There are 58,926 native white farmers in the state; 26,193 foreign born, white, and 3,078 Negro and other nonwhites, or a total of 88,197.

In addition to 11,389,894 acres of improved land in farms, there is 4,541,767 acres of woodland, and 11,999,783 acres of other unimproved lands in farms, or a total of 27,931,444 acres.

#### Farm Land.

Farm land is divided into (1) improved land, (2) woodland, and (3) all other unimproved land. *Improved land* includes all land regularly tilled or mowed, land pastured and cropped in rotation, land lying fallow, land in gardens, orchards, vineyards, and nurseries, and land occupied by farm buildings. *Woodland* includes all land covered with natural or planted forest trees, which produce, or later may produce, firewood or other forest products. *All other unimproved land* includes brush land, rough or stony land, swamp land, and any other land which is not improved or in forest. The census classification of farm land as "improved land," "woodland," and "other unimproved land" is one not always easy for the farmers or enumerators to make and the statistics therefore must be considered at best only a close approximation.

\*Full particulars can be obtained on application to the Land Settlement Board, Berkeley, California.

## Number, Area, and Value of Farms in 1900 and 1910.

	1900	1910	Increased per cent
Population -----	1,485,053	2,377,549	60.1
Number of farms -----	72,542	88,197	21.6
Land area of state, acres -----	99,898,880	*99,617,280	-----
Land in farms, acres -----	28,828,951	27,931,444	†3.1
Improved land in farms, acres -----	11,958,837	11,389,894	†4.8
Average acres per farm -----	397.4	316.7	†20.3
Total value of farm property -----	\$796,527,955	\$1,614,694,584	102.7
Land -----	630,444,960	1,317,195,448	108.9
Buildings -----	77,468,000	133,406,040	72.2
Implements and machinery -----	21,311,670	36,493,158	71.2
Domestic animals, poultry and bees -----	67,303,325	127,599,938	89.6
Average value of all property per farm -----	\$10,980.00	\$18,308.00	66.7
Average value of land per acre -----	21.87	47.16	115.6

\*Due to the formation of the Salton Sea.

†Decreased. This apparent falling off is due in part to errors in the tabulation in the census of 1900, when certain tracts included in forest reserves in 1910 were included in farm land in 1900.

## Summary of Population and Farms, 1850-1910.

Year	Population	Number of farms	Land in farms		Per cent of land area in farms
			All land	Improved	
1850 -----	92,597	872	3,893,985	32,454	3.9
1860 -----	379,994	18,716	8,730,034	2,468,034	8.8
1870 -----	560,247	23,724	11,427,105	6,218,133	11.5
1880 -----	861,694	35,934	16,593,742	10,669,698	16.7
1890 -----	1,213,398	52,894	21,427,293	12,222,839	21.5
1900 -----	1,485,053	72,542	28,828,951	11,958,837	28.9
1910 -----	2,377,549	88,197	27,931,444	11,389,894	28.0

## Value of Farm Property, 1910.

The total wealth in the form of farm property is \$1,614,695,000, of which 89.8 per cent is contributed by land and buildings, 7.9 per cent by live stock, and 2.3 per cent by implements and machinery. The value of land and buildings is \$1,450,601,000, being a little more than double that for 1900. In 1850 the value was only \$3,874,000.

The value of the different classes of farm property in 1910 was as follows:

Farm property	Value
Land .....	\$1,317,195,448
Buildings .....	133,406,040
Implements and machinery .....	36,493,158
Domestic animals .....	123,024,652
Poultry .....	3,844,526
Bees .....	729,793
Total.....	\$1,614,694,584

## Summary of Values, 1850-1910.

Year	Total value	Land and buildings	Implements and machinery	Domestic animals, poultry, and bees
1850 .....	\$7,328,582	\$3,874,041	\$103,483	\$3,351,058
1860 .....	86,870,327	48,726,804	2,558,506	35,585,017
1870 .....	184,521,470	141,240,028	5,316,690	37,964,752
1880 .....	*311,997,443	262,051,282	8,447,744	*41,498,417
1890 .....	*777,381,767	697,116,630	14,689,710	*65,575,427
1900 .....	796,527,955	707,912,960	21,311,670	67,303,325
1910 .....	1,614,694,584	1,450,601,488	36,493,158	127,599,938

\*Includes estimated value of range animals.

## Value of Farm Lands, 1912-1916.

The United States Department of Agriculture estimates the value per acre of farm lands in California and the United States as follows:

## Average Value of All Farm Lands, Per Acre, 1912-1916.

	Without improvements			With improvements		
	1912	1915	1916	1912	1915	1916
California .....	\$70 00	\$100 00	\$110 00	\$107 00	\$175 00	\$180 00
United States .....	36 23	40 85	45 55	57 89	64 82	69 45

Average Value of Plow Lands, Per Acre, 1916-1918.

	California	United States
Average of poor plow lands—		
1916 -----	\$55 00	\$42 67
1917 -----	66 00	47 86
1918 -----	69 00	51 26
Average of good plow lands—		
1916 -----	150 00	78 34
1917 -----	168 00	85 48
1918 -----	165 00	91 83
Average of all plow lands—		
1916 -----	110 00	62 17
1917 -----	120 00	68 38
1918 -----	121 00	74 31

The value of farm lands is increasing steadily in the United States. Iowa stands first in value of plow lands, her average being \$169 per acre, followed by Illinois with \$144 and California with \$121. In 1915 the average value per acre in California was only \$95 and in the United States \$58.39.

#### Size of Farms.

In California there is a great area of semiarid land utilized for grazing purposes only or left unutilized. Upon such lands are located many very large farms or ranches, and these explain the high average acreage per farm. Farms other than those used almost exclusively for grazing are not on the average unusually large, as compared with the average in other states. The average size of the California farm is 316.7 acres, compared with 4,465.6 in 1850; 466.4 in 1860; 481.7 in 1870, since which time it has decreased continually.

Of all the farms in California, 23.4 per cent are from 20 to 49 acres in size, 13.6 per cent from 100 to 174 acres, 13.5 per cent from 10 to 19 acres, and 12.1 per cent from 50 to 99 acres. Thus over three-fifths of all the farms are from 10 to 174 acres in size. About one-fourth are 175 acres or more. The increase in the relative number of the smaller farms in conjunction with the decline in aggregate farm acreage during the last ten years indicates a tendency to subdivide the large farms into smaller ones.

The following table shows the increase or decrease in the size of farms in 1910, as compared with 1900:

Size	Number of farms		Increase or decrease	
	1900	1910	Number	Per cent
Under 3 acres.....	1,492	1,269	-223	-14.9
3 to 9 acres.....	5,354	9,324	+3,970	+74.2
10 to 19 acres.....	8,236	11,932	+3,696	+44.9
20 to 49 acres.....	13,110	20,614	+7,504	+57.2
50 to 99 acres.....	8,067	10,680	+2,613	+32.4
100 to 174 acres.....	13,196	12,015	-1,181	-8.9
175 to 259 acres.....	4,635	4,689	+54	+1.2
260 to 499 acres.....	8,370	7,862	-508	-6.1
500 to 999 acres.....	5,329	5,119	-210	-3.9
1,000 acres and over.....	4,753	4,693	-60	-1.3
Totals.....	72,542	88,197	+15,655	+21.6

## Summary of Farms by Acreage in California, 1850-1910.

Acreage	1850	1860	1870	1880	1890	1900	1910
Under 3 acres.....				143	401	1,492	1,269
3 to 9 acres.....		829	2,187	1,064	2,827	5,354	9,324
10 to 19 acres.....		1,102	1,086	1,430	4,010	8,236	11,932
20 to 49 acres.....		2,344	3,064	3,475	7,691	13,110	20,614
50 to 99 acres.....		2,428	3,224	3,969	5,796	8,067	10,801
100 to 499 acres.....		6,541	12,248	20,214	24,531	26,201	24,566
500 to 999 acres.....		538	1,202	3,108	4,367	5,329	5,119
1,000 acres and over.....		262	713	2,531	3,672	4,753	4,693
Total number of farms.....	872	18,716	23,724	35,934	53,295	72,542	88,197
Average acres per farm.....	4,465.6	466.4	481.7	461.8	405.0	397.4	316.7

## Size of Farms, Improved and Unimproved, 1850-1910.

Acreage	1850	1860	1870	1880
Total number of acres in farms.....	3,893,985	8,730,034	11,427,105	16,593,742
Acres of improved land.....	32,454	2,468,034	6,218,133	10,669,698
Acres of unimproved land.....	3,861,531	6,262,000	5,208,972	5,924,044
Per cent of farm land improved.....	0.8	28.3	54.4	64.3

Acreage	1890	1900	1910
Total number of acres in farms.....	21,427,293	28,828,951	27,931,444
Acres of improved land.....	12,222,839	11,958,837	11,389,894
Acres of unimproved land.....	9,204,454	16,870,114	16,541,550
Per cent of farm land improved.....	57.6	41.5	40.8

## Farm Tenure.

The number of all farmers is 88,197. Of these, 66,632 are classed as owners, 3,417 as managers, and 18,148 as tenants.

Of the 66,632 owners, 56,500 operate land owned exclusively by them, while 10,132 operate land which they rent in addition to that which they own. The owners hold 75.5 per cent of all farms, tenants 20.6 per cent, and 3.9 per cent is operated by managers. The percentage of

tenants for the state (20.6) is above the average for the Pacific States (17.2), but low in comparison with the percentage for the United States as a whole (37).

#### Farm Mortgages.

The number of mortgaged farms in 1910 amounted to 40.5 per cent of the total number of 66,632 owned by farmers who own all their land, exclusive of those for which no mortgage report was obtained. The percentage is considerably higher than it was in 1890 and 1900:

Owmed farms	Number
Free from mortgage.....	39,368
Mortgaged .....	26,749
Unknown .....	515
Total.....	66,632

#### Irrigation of Farm Lands, 1900-1910.†

Of the 88,197 farms in the state, 39,352, or rather more than two-fifths (44.6 per cent), are irrigated. The total acreage irrigated is 2,664,104 acres, or 23.4 per cent of the improved land in farms. The enterprises existing in 1910 were capable of supplying water to 3,619,378 acres, and the total acreage included in irrigation projects, completed or under way, was 5,490,360 acres.

The following table shows the number of farms irrigated in comparison with the total number of farms in the state, the total land area, the total land in farms, and the total acreage of improved land in farms, together with the areas not yet irrigated for which water was available, and the acreage included in projects completed or under way:

Land and farms	1900	1910	Increase or decrease	
			Amount	Per cent
Number of all farms.....	72,542	88,197	15,655	21.6
Approximate land area of state.....	99,617,280	99,617,280	-----	-----
Land in farms.....	28,828,951	27,931,444	—897,507	—3.1
Improved land in farms.....	11,958,837	11,389,894	—568,943	—4.8
Number of farms irrigated.....	25,675	39,352	13,677	53.3
Acreage irrigated .....	1,446,114	2,664,104	1,217,990	84.2
Acreage enterprises capable of irrigating .....	*	3,619,378	-----	-----
Acreage included in projects.....	*	5,490,360	-----	-----
Percentage irrigated of number of all farms .....	35.4	44.6	9.2	-----
Approximate land area of state.....	1.5	2.7	1.2	-----
Land in farms.....	5.0	9.5	4.5	-----
Improved land in farms.....	12.1	23.4	11.3	-----
Excess of acreage enterprises were capable of irrigating over acreage irrigated in 1910.....	-----	955,274	-----	-----
Excess of acreage included in projects over acreage irrigated in 1910 .....	-----	2,826,256	-----	-----

\*No record.

## The Use of Fertilizers.\*

From figures compiled by the United States Department of Agriculture it appears that the use of fertilizers is increasing in many states.

	Fertilizer per acre, where used, pounds			Value of fertilizer per acre, 1917
	1917	1916	Usual year	
Virginia -----	400	290	330	\$7 30
North Carolina -----	400	303	397	6 25
South Carolina -----	350	270	410	5 00
Georgia -----	225	198	288	3 60
Florida -----	200	160	230	3 00
Alabama -----	175	180	280	2 50
Mississippi -----	180	170	219	2 40
Louisiana -----	200	185	210	2 60
Texas -----	160	-----	-----	2 25
Arkansas -----	160	163	185	2 50
Tennessee -----	190	175	186	2 40

## PART II.

### POPULATION OF CALIFORNIA.

**Population 1850-1917; Indians of California; Density of Population; Population of Municipalities of 8,000 and Upwards; Cities of 2,500 to 6,000; Urban and Rural Population; Blind Population; Mortality Statistics; Marriages, Births and Deaths 1915-1917; Estimated Population of Cities and Towns, 1915; Population by Counties, 1850-1910; White and Colored Population; Foreign-born Population; Japanese Farmers, 1912; Color and Nativity of Farmers.**

The first settlement in California was made by the Spaniards in 1769, when the Franciscan Fathers founded a mission at San Diego. In 1776 the Mission Dolores was established where San Francisco now stands. California was under Spanish rule until 1822, when, at the termination of the Mexican revolution, it declared its allegiance to Mexico. For several years prior to 1846 large numbers of immigrants from the United States had been arriving in California, and in June of that year a revolt against Mexico was begun by the American settlers. In July and August the American flag was raised at Monterey, San Francisco, Sonoma, Sacramento, San Jose, San Diego, Santa Barbara, Los Angeles, and other places.

The end of the war in Mexico took place January, 1847, and in February, 1848, California was ceded to the United States. From 1846 to 1849 California was under military and provisional rule by the United States. In October, 1849, a state constitution was adopted at Monterey, and on September 9, 1850, California became a state of the Union.

Population of California, 1850-1916.

Year	Population	Increase over preceding census	
		Number	Per cent
1850	92,597		
1860	379,994	287,397	310.4
1870	560,247	180,253	47.4
1880	864,694	304,447	54.3
1890	*1,213,398	348,704	40.3
1900	1,485,053	271,655	22.4
1910	2,377,549	892,496	60.1
1916	2,938,654		

\*Includes population of Indian reservations (5,268).

During each decade since 1850, the population of California has increased more rapidly than that of continental United States. The population of the state in 1910 was more than twenty-five times as large as in 1850, while the population of the continental United States was a little less than four times that in 1850.

Front Elevation, New Agricultural and Horticultural Building, California State Fair Grounds, Sacramento.  
Completed in 1918.

## Rank in Population of the Fifty States and Territories.

California ranked twenty-ninth in 1850, twenty-sixth in 1860, twenty-fourth in 1870 and 1880, twenty-second in 1890, twenty-first in 1900, and twelfth in 1910.

## The Density of Population Per Square Mile, 1850-1917.

1850 -----	0.6	1890 -----	7.8
1860 -----	2.4	1900 -----	9.5
1870 -----	3.6	1910 -----	15.3
1880 -----	5.5	1917 -----	19.5

The density of population in California is low, the average number of persons to the square mile in 1910 being 15.3; and the estimated number in 1916, 18.9. The average number per square mile for continental United States in 1910 was 30.9. This compares with 508.8 in Rhode Island, 418.8 in Massachusetts, 337.7 in New Jersey, 191.2 in New York, 342.4 in the United Kingdom, and 213.3 in India. The Australian commonwealth has only 1.39 to the square mile, New Zealand 7.8, and Canada 1.4; 589 in Belgium, 436 in Holland, 188 in France, and 270 in Germany.

## Population by Counties, 1910 and 1917.

\*Includes the population of San Pedro city, annexed in 1909.

†Estimated.

‡It is stated in San Francisco that the best computation available upon the basis of gas and water users and school attendance makes the population 587,000 in 1918, and 601,000 in June, 1919.

San Francisco, the largest city, had a population in 1910 of 416,912, and Los Angeles, the second city, a population of 319,198. Oakland, with 150,174 inhabitants, is the only other city in the state having over 100,000 inhabitants. The following eight cities had over 25,000 inhabitants in 1910:

California has 58 counties, the population ranging in 1910 from 309 in Alpine to 504,131 in Los Angeles County.

Two territorial changes have taken place since 1900: The eastern portion of San Diego County was taken into Imperial County in 1907, and part of Fresno County was annexed to Kings County in 1909.

Ten counties have decreased in population during the decade 1900-1910, the rates of decrease ranging from 5.8 per cent in Mono County, to 39.3 in Alpine County, and a decrease from 125 in Mono County to 2,834 in Nevada County.

San Bernardino County, with 20,157 square miles, has the largest area; San Francisco County, coextensive with San Francisco city, with 43 square miles and 9,695.6 persons per square mile, has the smallest area and the highest density. Alpine, Inyo, and Mono counties each average less than one person per square mile. In 1910 the urban territory of the state, or the cities and incorporated towns of 2,500 or more, contained 61.8 per cent of the total population, while 38.2 per cent lived in rural territory.

#### Urban and Rural Population.

The urban territory of the state in 1910—that is, the cities, and incorporated towns of 2,500 or more—contained 1,469,739 inhabitants, or 61.8 per cent of the total population, while 907,810 inhabitants, or 38.2 per cent, lived in rural territory.

In 128 places of less than 2,500 inhabitants each have an aggregate population of 153,052, or 6.4 per cent of the total population of the state. In 1910, therefore, the urban population was 1,469,739 and the rural territory 907,810, the latter made up as follows: Cities and towns of less than 2,500, 153,052; other rural territory 704,758, or a total of 907,810.

#### White and Colored Population in Three Municipalities, 1910 and 1917.

Three municipalities having 8,000 or more population in 1910, had 10,000 or more colored, or at least ten per cent of their population colored.

Municipality	Census, 1910			Estimated, 1917		
	White	Colored	Totals	White	Colored	Totals

## MORTALITY STATISTICS IN REGISTRATION AREA.

The number of deaths of all ages in the registration area and its subdivisions and each city of 100,000 population or over for the calendar years 1914 and 1915 are classified as follows:

Age	Number of deaths		
	1914	1915	1916
Under 1 year	3,956	3,565	3,671
1 year	771	663	718
2 years	421	371	365
3 years	260	275	227
4 years	184	199	199
Under 5 years	5,592	5,073	5,180
5 to 9	641	647	572
10 to 14	435	438	451
15 to 19	716	799	713
20 to 24	1,417	1,350	1,289
25 to 29	1,818	1,871	1,668
30 to 34	1,959	1,894	1,882
35 to 39	2,091	2,153	2,155
40 to 44	2,157	2,096	2,211
45 to 49	2,132	2,279	2,440
50 to 54	2,449	2,504	2,631
55 to 59	2,368	2,674	2,782
60 to 64	2,652	2,789	2,922
65 to 69	2,742	3,024	3,102
70 to 74	2,833	3,095	3,184
75 to 79	2,462	2,689	2,857
80 to 84	1,829	2,126	2,085
85 to 89	860	1,070	1,188
90 to 94	298	324	365
95 to 99	60	72	87
100 years and over	15	21	24
Deaths at unknown age	16	50	18

California was added to the registration area in 1906.

ACCIDENTS.—In 1916 the number of deaths from accidents and injuries was, railroad 325, street car 100, automobile 478.

SUICIDE.—In 1915, as in other years, in well over half of the deaths charged to this heading, the means used were poison and firearms. Among the registration states the highest rate was that for California (35.5 per 100,000 population). Next in order were Montana, with 23.1, Washington, 20.7, and Missouri, 19.9.

Among the registration cities having 100,000 inhabitants or more, the highest five for 1915 were: San Francisco 56.6, Omaha 41.7, St. Louis 36.5, Los Angeles 33.7 and Kansas City, Mo. 30.7.

The death rate for suicide in the registration area in 1916 was the lowest (14.2 per 100,000 population) recorded for the ten years 1907-1916. The five states which show the highest rates in 1916 are California (31.7), Montana (24.6), Indiana (17.1), Vermont (16.8), and Missouri (16.6). California has had the highest rate of any of the registration states since 1906.

PERSONS ENGAGED IN CALIFORNIA MANUFACTURING INDUSTRIES.

Class	Male	Female	Total
Proprietors and officials.....	16,606	563	17,169
Proprietors and firm members.....	10,027	402	10,429

## ESTIMATED POPULATIONS OF CITIES AND TOWNS IN 1915.

(From the Report of the State Controller, 1915.)

The populations of the various cities of the state which follow are based upon estimates. It is not claimed that they are correct, but presumably they are approximately so—at any rate they are as near the mark as the various city clerks or auditors can hit it after careful investigation.

The difference in the totals as ascertained by three methods is not great, 150,000 separating the highest from the lowest, as follows:

School census method.....	3,004,000
Registered vote method.....	2,878,470
United States census method.....	2,854,727

On the basis of the percentage of increase according to the census bureau's method, the rural population of the state should be 837,781. The cities claim 2,450,181. The two figures give a total of 3,287,962, which exceeds the highest estimate by any of three methods indicated.

The total numbers for the state are probably approximately correct, but as regards cities and towns, the estimated increase is in many cases too high. Some are rapidly increasing, but the population of others is more or less stationary, and in some cases on the decline. During the decade between 1900 and 1910 ten counties showed a decrease in population, the rates of decrease ranging from 5.8 per cent in Mono County to 39.3 per cent in Alpine County, and the absolute decreases from 125 in Mono County to 2,834 in Nevada County.

TABLE VI.

## Estimated Population of Cities and Towns in California on June 30, 1915.

(From the Report of the State Controller.)

City	Population per 1910 census	Estimated population June 30, 1915	City	Population per 1910 census	Estimated population June 30, 1915

Totals	331	12,726	\$609,605	218	\$235,675	282	17,596

\*In 32 instances the acreage was not reported. Leases recorded from November 1, 1909, to December 1, 1912.

NOTE.—These figures show only the leases recorded in the offices of the various recorders, and do not represent all the land leased to Japanese, as most of the share leases are not recorded.

## JAPANESE STATISTICS.

In March, 1912, the Japanese owned 331 farms, containing 12,726 acres, the assessed value of the land being \$478,990, the improvements \$130,615, or a total of \$609,605.

The number of town lots held by Japanese was 218, the assessed value \$136,955, and the improvements \$98,720, or a total of \$235,675.

The information gathered in accordance with an act of the legislature (chapter 134, of 1909) shows that there were 2,548 business establishments, the capital invested in most cases being very small, 68.7 per cent of the total having a capital of less than \$1,000. The total aggregate capital invested, exclusive of that represented by banks, was \$4,075,226. The total annual business transacted by these establishments amounted to \$16,114,407, of which about 37 per cent was carried on with white persons. The total annual rent paid by these Japanese business houses was over \$900,000.

## Comparative Summary.

	1909	1912
<b>Owners:</b>		
Acreage .....	10,791	12,726 + 1,935
Total assessed value .....	\$397,298	\$609,605 + \$212,307
 Number of town lots .....		218
Total assessed value .....	\$174,694	\$235,675 + \$60,981
<b>Leases:</b>		
Number .....	319	282
Acreage .....	20,294	17,596

*Color and Nativity.* Of the total population of California, 1,106,533, or 46.5 per cent, are native whites of native parentage; 635,889, or 26.8 per cent, are native whites of foreign or mixed parentage, and 517,250, or 21.8 per cent, are foreign-born whites. The corresponding percentages in 1900 were 43.4, 29.7, and 21.3, respectively, the proportion of native whites of native parentage increasing somewhat during the decade. In 1910 Japanese constituted 1.7 per cent of the population; Chinese, 1.5; Negroes, 0.9; and Indians, 0.7. In 8 of the 58 counties the foreign-born whites represent as much as one-fourth of the population, the percentage being highest (32) in San Mateo. The proportion of native whites of foreign or mixed parentage exceeds one-fourth in 24 counties and is highest in San Francisco County (36.9 per cent).

*Dwellings and Families.* The total number of dwellings in California is 513,481, and the total number of families 563,636, there being 109.8 families to each 100 dwellings. The average number of persons per dwelling is 4.6, and the average number per family, 4.2.

According to an estimate prepared on June 30, 1916, by the six Japanese Consulates, the Japanese population in the respective consular districts was as follows:\*

Consulates	Male	Female	Total
Seattle .....	7,397	1,835	9,232
Portland .....	4,497	906	5,403
San Francisco .....	35,531	15,259	50,790
Los Angeles .....	19,992	3,774	23,766
Chicago .....	2,131	250	2,381
New York .....	2,552	246	2,798
Totals .....	72,100	22,270	94,370

The total Japanese population in continental United States is 94,370. Of this total only 5,179 are in the consular districts of Chicago and New York. The remaining 89,191 are in the consular districts of Seattle, Portland, San Francisco, and Los Angeles. Again, of these 89,191, 74,556 are in the San Francisco and Los Angeles consular districts, covering six states measuring 694,515 square miles. The Japanese population in California is 55,095.

The following statistics will make clear the present status of the Japanese farmers of California:

Total population .....	55,695
Agricultural population .....	32,530
Number of farms .....	5,800
Farms owned by farmers .....	649
Cultivated area (acreage) .....	349,800
Land owned by Japanese .....	29,000
Average acreage of each farm .....	60

(The figures concerning the Japanese are taken from the estimate made by the Japanese Agricultural Association.)

The following table shows the approximate acreage and the value of Japanese produce in California for 1917:

	Acreage	Value
Fruits .....	38,000	\$4,560,000
Grapes .....	37,000	3,330,000
Berries .....	8,800	3,720,000
Beans .....	52,000	4,160,000
Beets .....	45,000	2,700,000
Potatoes .....	35,000	4,200,000
Cotton .....	18,000	1,800,000
Cantaloupes .....	14,500	3,190,000
Rice .....	16,500	910,000
Asparagus .....	11,000	1,650,000
Tomatoes .....	9,500	950,000
Onions .....	7,500	2,625,000
Lettuce .....	4,800	620,000
Cabbage .....	2,500	340,000
Celery .....	2,400	672,000
Seeds .....	4,500	675,000
Hay, etc. ....	35,000	3,500,000
Other vegetables .....	7,800	1,560,000
Totals .....	339,800	\$41,162,000

\*From report published by the Japanese Agricultural Association, San Francisco, 1918.

## PART III.

## DOMESTIC ANIMALS.

**Cattle, Horses, Mules, Asses, Swine, Sheep and Goats; Number and Value of Farm Animals 1875-1916; Imports and Exports of Farm Animals; Horses and Mules by Counties; Cattle, Sheep and Lambs by Counties; Production of Wool by Counties; Goats and Goats Hair; Summary of Domestic Animals by Counties.**

## HORSES.\*

The term "light" when applied to horses refers to that class which is intermediate in size between ponies and draft horses and which usually has more range, a greater degree of quality, better action, or greater speed than either. A majority of our light horses are from 15 to 16 hands high and weigh from 900 to 1,250 pounds.

There is no best breed of light horses. Some breeds are superior to others in certain respects and one breed may be better adapted than another to certain local conditions. The general requirements for a particular section and the popularity of a certain breed in a certain locality should receive the utmost consideration in choosing a breed.

*The Arabian.*—The oldest breed of horses generally recognized at the present time and the fountainhead of all our other light breeds was developed in the desert country of Arabia, from which it derives its name.

*Thoroughbred.*—The name "Thoroughbred" is applied properly only to the breed of running race horses produced originally in England. Three Arabian stallions are credited with having laid the foundation for this breed, their names being Byerly Turk, The Darley Arabian, and Godolphin Arabian, and they produced the three famous racing families, Herod, Eclipse, and Matchem, respectively.

*Standardbred.*—The Standardbred is an American breed developed primarily for extreme speed at the trot and pace. The imported Thoroughbred stallions Messenger and Bellfounder founded this breed by leaving descendants that showed speed at the trot. The ancestry of the pacer is not different from that of the trotter, but today some families produce a much larger proportion of pacers than others, while many individuals show speed at both gaits. Both trotters and pacers are registered in the same studbook.

The early residents of Kentucky, Tennessee, Virginia, and West Virginia found horses with easy gaits to be the most desirable to ride over plantations, semimountainous grazing farms, and on long journeys. In the preference for such gaits they laid the foundation for and promoted the pioneer development of the American Saddle Horse. Sections of Missouri also soon took up the breeding of easy-gaited saddle horses, and today this state ranks next to the mother state (Kentucky) in the production of high-class individuals.

Thoroughbred, Morgan and Canadian blood form the basis for this breed.

\*For list of Breeders' Associations, see Appendix C.

**Itbos No. 90754. Champion Percheron Stallion. California State Fair, 1917 and 1918. Owned by M. Bassett, Hanford, California.**

**Stevenot No. 9260. Champion Belgian Stallion. California State Fair, 1917 and 1918. Owned by Ruby & Bowers, Davis, California.**

*Morgan.*—The Morgans have sometimes been considered a family of the Standardbred, but as these horses have been bred more for their utility qualities than for speed, and as their characteristics are well established and perpetuated with marked regularity, it is proper to consider them as a distinct breed. The early development of the Morgans took place in the New England states, thus giving this country the credit of founding three light breeds.

*Hackney.*—The first driving horses used in England of which much is known were the Norfolk trotters, they being the result largely of breeding Norfolk mares to Thoroughbred stallions, thus giving the foundation for the Hackney breed.

*French Coach.*—The term French Coach is used in this country to designate horses produced in France largely by Government aid and with the special object of obtaining animals especially well suited for military purposes. Such horses are not known as French Coach in their native country, but are termed Demi-Sang (half-breed). In this country the term half-bred is applied to horses of half or more Thoroughbred blood.

*German Coach.*—Germany, with the object of producing a large, strong, and active horse that would be especially well adapted to carrying the German soldier and his heavy equipment and to hauling artillery, established the breed of horses known in this country as the German Coach. In Germany there are several distinct breeds of such horses, each of which is registered in a separate studbook.

*Cleveland Bay.*—Although little is definitely known concerning the foundation of the Cleveland Bay breed, it is generally conceded that Thoroughbred blood played an important part in giving the Cleveland Bay many of its desirable characteristics. The early development of horses of this type, which were selected for bay color with practically no white, took place largely on the pastured Cleveland hills of Yorkshire County, England, the color sought and the locality being responsible for the breed name. In England the Yorkshire Coach is considered a separate breed from the Cleveland Bay, but in this country they are registered in the same studbook.

#### RECOGNIZED BREEDS AND PURE BRED ANIMALS IMPORTED.

(Under an act of Congress, approved August 5, 1909, effective on and after November 11, 1913.)

Name of breed	Horses.	Book of record
Belgian Draft.....	Studbook des Chevaux de Trait Belges	
Clydesdale .....	Clydesdale Studbook

\*Provided that no animal or animals registered in the Australian or in the French thoroughbred studbooks shall be certified as pure bred unless such animal or animals trace in all crosses to animals which are proved to the satisfaction of the department to be of the thoroughbred breed.

## Recognized Breeds and Books of Record in Canada.

The Canadian National Records are recognized for the following breeds, provided that no animal or animals register in the Canadian National Records shall be certified by the Secretary of Agriculture as pure bred unless such animal or animals trace, in all crosses, to animals which are proved to the satisfaction of the department to be of the same breed and to have been imported from the country in which the breed originated.

## Certificated Horses Imported, 1914-1918.

The following table shows the number of certificated horses imported for breeding purposes during the calendar year ending December 31, 1914-1918 for which certificates of pure breeding have been issued by the Bureau of Animal Industry of the United States Department of Agriculture. Owing to the war the numbers show a considerable decrease compared with 1914.

## Stallion Registration Board.

On July 31, 1918, there were 590 registered stallions in California: of these 341 were purebred, 128 grade, 4 crossbred, 2 non-standard and 115 mongrel. The principal breeds were 247 Percheron, 76 Belgian and 42 Standard. Of Jacks there were 173, viz: 80 purebred, 10 grade and 83 mongrel. San Joaquin and Fresno were the leading counties in registered stallions.

## CATTLE.\*

Cattle not being native to America, there are no strictly American breeds, but owing to difference in climate, care and ideals of American breeders, the European breeds which have been brought to America have changed to some extent.

## Beef Breeds.

The breeds of beef cattle in the United States are the Shorthorn (sometimes called Durham), Polled Durham, Hereford, Aberdeen-Angus, and Galloway. Each of these breeds has been carefully developed for a long period of years, with the result that individuals transmit their characters very readily when bred to native or scrub cattle. With somewhat frequent exceptions in the case of Shorthorns, the cows of these breeds are not heavy milkers, and in this point lies their success as beef cattle, for the milking tendency is associated with a conformation of body which prevents the animal from yielding the greatest quantity and the best quality of beef. The beef breeds have been bred for the maximum production of beef, and only enough milk is desired to nourish and produce a good, thrifty calf. They are most popular with farmers or ranchers who raise a considerable number of cattle.

*Shorthorn.*†—The Shorthorn is the most popular of the beef breeds in the United States, as shown by their numbers and by their general distribution over all parts of the country. They have a great range of adaptability and do well everywhere. The milking qualities, combined with the high standard as a beef animal and the gentle disposition, have caused the Shorthorn cow to be termed "the farmer's cow." The three important strains of Shorthorn cattle have been the Booth, the Bates, and the Scotch tribes. The Booth and Scotch strains represent the true beef type of Shorthorns, while the Bates approaches the dual-purpose type. The Shorthorn is the largest breed of beef cattle.

The color of this breed may be red, red and white, pure white, or roan. No other breed of cattle has the roan color, therefore this color in any other cattle usually signifies the presence of some Shorthorn blood.

The dual-purpose breeds are a class of cattle which have been developed to produce a fair to good quality of beef, and at the same time the females should give a good flow of milk.

*Polled Durham.*—The Polled Durham is a polled Shorthorn. There are two general divisions of this breed, the "single standard" and "the double standard." The single-standard Polled Durhams were produced by breeding "muley" cows to Shorthorn bulls, selecting the polled offspring and breeding these to other Shorthorn bulls.

The double-standard Polled Durhams were secured by using purebred Shorthorn cows that were either natural muleys or had undeveloped horns, for breeding to Shorthorn bulls. The double-standard Polled Durhams are purebred Shorthorns and can be registered in either the Shorthorn or the Polled Durham herdbooks.

This breed is similar to the Shorthorn in every way except that it is hornless. It is a comparatively new breed of cattle, and has not become so popular as the older breeds, but it is increasing in popularity.

\*For list of Breeders' Associations, see Appendix C.

†These are the leading breeds in California.

*Hereford.*†—The Hereford ranks next to the Shorthorn in numbers in the United States. Their popularity is constantly increasing, especially where cattle are raised under range or adverse conditions. The Hereford cows have been criticised because of their scanty milk flow, but they usually produce enough to raise a good calf. As a breed they have a better heart girth, stronger constitution, and can withstand adverse conditions better than the Shorthorns. They are early maturing and fatten readily in the feed lot.

In color the Hereford is red with white markings. The white markings usually consist of a white face and head, the white extending along the top of the neck and shoulders, a white throat and dewlap, and white on the underline. Frequently, however, no white is found on the neck or top of shoulders.

*Polled Hereford.*†—The Polled Hereford is a new breed developed by selecting and breeding Herefords which showed polled characteristics. The double-standard Polled Herefords are purebred Herefords which are hornless and are eligible to registry in either the American Hereford herdbook or the American Polled Hereford record. They differ in no way from the Hereford except that they have no horns. The polled feature has been well fixed and the bulls when mated with native cattle sire few calves having either long scurs or horns.

*Aberdeen-Angus.*†—Aberdeen-Angus cattle are solid black in color and have no horns. These characteristics are so strongly developed that a bull, when bred to horned cows of various colors, will usually produce calves of which 85 per cent or more are black in color and hornless. Occasionally a red animal is found in this breed, but the color is not popular among breeders. While the Aberdeen-Angus is an old breed, it is only within recent years that it has been so popular in the United States. While they are good rustlers, they have never been as popular on the ranges of the west as either the Hereford or the Shorthorn. They stand next to the Hereford and above the Shorthorn as grazers on scanty pastures. This breed is extremely valuable for grading up native cattle, but they have been criticized to a certain extent by range-men because they do not get a greater percentage of calves. This has usually been true where they have been in a herd with horned bulls. If all the bulls were either polled or dehorned there would doubtless be less ground for this claim. The milking qualities of the cows are only fair; they give more milk than the Hereford, but not as much as the Shorthorn. A sufficient quantity of milk is produced to raise a good calf.

This breed is very early maturing, and has a tendency to fatten well at any age, hence their popularity for producing baby beef.

*Galloway.*—The Galloway is one of the oldest breeds of cattle. They are polled, solid black in color, though occasionally some brown is shown, and have a long, curly, silky coat. This breed is very prepotent and transmits the black color and polled characteristics readily to offspring from cows of any color. As high as 90 per cent of the calves from various-colored cows are black, and from 95 to 99 per cent of the offspring from horned cows are polled. This breed is slow maturing, when compared to the Aberdeen-Angus or the Hereford. In size they are smaller than any of the other beef breeds.

†These are the leading breeds in California.

Willowmoor Vesta IV (34150). Grand Champion Ayrshire Cow. California State Fair 1917 and 1918. Owned by E. B. McFarland, San Mateo, California.

*Red Polls.*—The Red Polled cattle originated in England and were introduced into this country in 1873, but few importations were made until about 1885. Since that time many have been imported. This is strictly a dual-purpose breed, and approaches the ideal of the dual-purpose type. In size they are smaller than the beef breeds, and have not the thick covering of flesh.

The Red Polls are more nervous than the Shorthorn, but less so than the Aberdeen-Angus. As this is a comparatively young breed, they are not so popular as the older breeds.

*Devon.*—This is one of the oldest breeds of cattle. They were introduced into this country at an early date and became popular in New England and in parts of Virginia nearly a century ago. The cows were good milkers, and the steers were used as work oxen or for beef, and filled either place admirably. They are exceedingly good rustlers, are vigorous, hardy, withstand both heat and cold well, and are very prepotent. For these reasons they were popular with the people of New England. They are slower of growth than any of the beef breeds except the Galloway. Their endurance, intelligence, and their gameness have made them popular as work oxen wherever they have been tried—no breed excels them in this respect.

*Brahman* or "*Indian*" *Cattle.*—Under the names of Brahman, "*Indian*," or Zebu cattle are classified a number of different strains of cattle of the species *Bos indicus*. Some of these strains vary so in type, color, size, and habitat that they are classified as separate breeds. The most important breeds of these cattle are the Krishna Valley and Hissar breeds. These cattle are classed as dual-purpose animals, as many of the females give a good quantity of milk. They are used quite generally in India as milch cows, and are more satisfactory than any other breed of cattle under the severe conditions of drought, heat, insect enemies, etc.

Although they are of a different species from our common breeds of cattle, they cross readily with them.

#### Dairy Cattle.

In the United States five breeds of dairy cattle have attained considerable prominence, namely, the Ayrshire, Brown Swiss, Guernsey, Holstein-Friesian, and Jersey. These breeds have been developed carefully for a considerable time for the purpose of dairy production, and in consequence each transmits its characteristics with regularity to its offspring. Certain distinct features distinguish each breed from the others, but all possess ability as milk producers.

*Ayrshire.*†—The Ayrshire breed originated in the County of Ayr, in southwestern Scotland. In that region, which borders on the Irish Sea, the surface is rolling and has much rough woodland. Pastures, therefore, are somewhat sparse and it is necessary for animals to graze large areas in order to obtain sufficient feed.

It is only within the last hundred years that Ayrshires have had a type well enough established to be entitled to the designation of breed. No exact account of the different infusions of blood of other breeds into the native Scotch cattle to form the Ayrshire breed is at hand.

†These are the leading breeds in California.

It is probable, however, that the Channel Islands, Dutch, and English cattle were all represented. The first importation of Ayrshires to this country was made in 1822, since which time there have been frequent importations into both the United States and Canada. New England, New York, and Pennsylvania probably contain the largest number of representatives of the breed.

*Brown Swiss.*†—The Brown Swiss breed originated in the Canton of Schwyz, in eastern central Switzerland. The cattle are called variously Brown Switzer, Brown Schwyzer, and Brown Swiss, the last name being the one commonly used in the United States. Conditions in Switzerland are such that a strong animal capable not only of milk production but of service as a draft animal is desired, and the large frame is evidence of fitness for these requirements.

The first importation into the United States was made in 1869, and although other importations have been made since, comparatively few animals have been brought to this country.

*Guernsey.*†—The Guernsey breed had its early development on the Channel Islands of Guernsey and Alderney, and at present cattle from either island are eligible to registry in the herd book of the American Guernsey Cattle Club. The origin of the breed is obscure, but it is probable that the parent stock came from Normandy, France, which is adjacent to the islands. Early live-stock laws of the islands prevented the importation of live stock for any purpose except slaughter, and under these conditions, in the course of the last century, the cattle developed into a distinct breed.

The climate of the Channel Islands being mild throughout the year, allows a long grazing season. Because of the high price of land for market-gardening purposes, the cows are tethered on pasture to avoid waste of feed. Although they come from the same parent stock, Guernseys differ from Jerseys in having been developed by men who had somewhat different ideals. The Guernsey of today is larger than the Jersey, and differs in other respects. The first representatives of the breed were imported in the early part of the nineteenth century. There is some resemblance between the Guernsey and the Jersey, but the former is larger and slightly coarser-boned, with a deeper and more "rangy" body. The head also is somewhat longer and more narrow than that of the Jersey.

*Jersey.*†—The island of Jersey, the largest of the Channel Islands, is the native home of the Jersey breed of cattle. Except for immediate slaughter, no cattle have been landed on the island since 1779, so that ever since that time the purity of the breed has been preserved. It seems probable that the foundation stock is the same as the Guernsey, namely, from Brittany and Normandy, in nearby northwestern France. Conditions on Jersey are similar to those on Guernsey. The breeders on the island have developed cattle that, in addition to productive ability, have uniformity of type and natural beauty, while in America the breeders have developed greater size, with less refinement of features.

Jerseys were first imported into the United States about the middle of the last century, and since that time importations have been made practically every year. The breed probably has the largest numbers

†These are the leading breeds in California.

**Glenside Royal** (408155). Grand Champion Milking Shorthorn Bull. California State Fair, 1917 and 1918. Owned by Alexander & Kellogg, Suisun, California.

and widest distribution of all the dairy breeds in this country. Large numbers of Jerseys may be found throughout New England, the Middle West, the South, and the Southwest.

Jerseys are the smallest of the dairy breeds.

*Holstein-Friesian.*†—In the low countries bordering on the North Sea, especially in the northern part of Holland, Holstein-Friesian cattle have been bred for centuries. The land is rich and fertile and pastures are exceptionally good. Different names have been used to designate the breed, both in Europe and America, among which the following are the more common: North Hollander, Holland, Netherland, Holstein-Friesian, Dutch, Dutch-Friesian, and Holstein. The last is the name usually used in this country, although Holstein-Friesian is the official name.

The Dutch settlers in the State of New York probably were the first to import individuals of the Holstein-Friesian breed, but the first importations of which records exist were made between 1857 and 1862 by Mr. W. W. Chenery, of Massachusetts, and many of our present-day animals are descended from these importations.

The Holstein is the largest of the dairy breeds.

From the point of view of milk production Holsteins average higher than any other breed. The percentage of butterfat, however, which averages lower than that of any other dairy breed, tends to counterbalance the advantage of greater production.

Summary of All Domestic Animals and Their Value, 1910.\*

Kind	On farms		Not on farms		Total	
	Number	Value	Number	Value	Number	Value
All cattle -----	2,077,025	\$52,785,068	46,176	\$1,604,717	2,123,201	\$54,389,785

\*Most of the domestic animals not on farms are found in cities, towns, and villages.

#### Neat Cattle.

The Shorthorns, Herefords, and Aberdeen Angus comprise practically all of the pure-blooded cattle in the United States used for breeding and for grading up native cattle for beef purposes.

#### Working Oxen.

In the early days oxen were largely employed in farming operations. In 1860 they numbered upward of 26,000, but the number declined rapidly during the next ten years, and after 1890 they dwindled away.

#### Asses and Burros.

In 1832, Henry Clay, who was a great advocate of the use of mules, brought the first pure-blooded Catalonian jack to Kentucky, and from then until the civil war quite a number of jacks were imported. With

the revival of business after the war, there was a great demand for jacks, and they were imported from all the Mediterranean countries.

Until this time there had been but two breeds of asses generally recognized in this country, Maltese and Spanish. The importations into Tennessee and Kentucky have resulted in the production of the native type that is regarded by some breeders as better than any now imported.

There are also a large number of small donkeys, or burros, descendants of the small asses brought into Mexico and New Mexico at the early settlement of that section by the Spaniards, and are used principally by the Spanish and Mexican element. They are most useful in the mountainous sections.

#### Sheep.

In 1565, Spanish sheep were introduced into Florida, and those in that state today preserve traces of their Spanish origin. In 1773 they were introduced into California, and under the care of the Missions rapidly increased until, in 1825, it was estimated that seventeen of these Missions, extending from San Diego to San Francisco, held an aggregate of 1,003,970 sheep, exclusive of flocks owned by ranchers.

Sheep of which at one time there were very large flocks, have fallen off since the year 1880, when they numbered 4,152,349; in 1910 there were 2,417,477, or a decrease of 1,734,872 since the former year.

All the domestic sheep in America have originated from importations, most of which have been made from European countries since the beginning of the nineteenth century.

The better known breeds can be grouped into three classes:

The middle wool class includes Southdown, Shropshires, Hampshires, Oxfords, Dorsets, Cheviots, Suffolks, and Tunis.

The long wool class included the Cotswold, Leicester, and Lincoln breeds and the Romney Marsh.

The fine wool class includes the American Merino and the Rambouillet. The various strains of Merinos formerly known by numerous names are now grouped into three types, A, B, and C.

The Southdown\* is of the middle wool breeds, and is probably the oldest breed of sheep in existence, and is also the mutton sheep above all.

The Shropshire\* is the most widely known and bred of the "down" breeds in America, and is the most popular of medium wool sheep.

#### Other Long Wool Breeds.

Other long wool breeds are the Romney Marsh,\* or Kent, the Wensleydale, Devon Long Wool, and Corriedale,\* a breed developed in New Zealand.

#### Fine Wool Sheep.

All fine wool sheep are descendants of earlier Spanish stock. The American Merinos have been bred nearly altogether for wool. Some breeders of the Delaine, or C type Merino, have bred to some extent for a mutton carcass, in addition to fineness and length of wool. In the case of Rambouillet there has been a great effort to improve the mutton qualities. A common characteristic of all Merinos and Rambouillets is the fineness of the wool.

\*These are the leading breeds in California. For list of Sheep Breeders' Associations, see Appendix C.

**Bullion of Edgmoor** (34510). Grand Champion Guernsey Bull, California State Fair, 1918. Owned by  
A. B. Humphrey, Escalon, California.

The American Merino\* A, B, and C type.

The Rambouillet\* is the largest and strongest of fine wool sheep, or Merino breed, and was developed by the French government between 1783 and 1799 in order to secure a domestic supply of wool. They were first introduced into the United States in 1840.

The Hampshire,\* with possibly one exception (the Oxford), is the largest of the down breeds, and it is excelled in size only by the Lincoln and Cotswold among the long wools.

The Oxford Down\*—the blood of the Hampshire and Cotswold was used in forming this breed. It is the largest of the medium wool breeds.

The Dorset Horn\* is an extremely old breed like the Southdown, and is of the middle wool type, and medium sized, and probably the most fertile of all the mutton breeds.

The Cheviot\* is a mountain breed sheep, and an extremely old one, rather small and hardy. The mutton is of good quality.

Other middle wool breeds:

The Suffolk Down is comparatively a new breed of sheep and was first imported into the United States in 1888.

The Tunis comes from Northern Africa, and the wool is white, brown, reddish or mixed in color. The American Tunis has been improved by an infusion of Southdown blood, and the fat tail of the original has been greatly reduced.

#### Long Wool Breeds.

The long wools, bred chiefly for mutton, are the largest breed of sheep and with very broad backs.

The Cotswold\* is a big-bodied rather tall sheep, and with the exception of the Lincoln, is the largest breed of domesticated sheep. It has become famous in Australia, South America, South Africa, and the United States and Canada.

The Leicester\* is very easily distinguished from the other long wools by its lean and strong face. Practically all the Leicesters in America today are of a modified border type.

The Lincoln\* is shorter and more compactly built than the Cotswold.

There are many other varieties of sheep but little known in the United States, such as the Welsh Mountain, Exmoor Horn, the Ryeland, the Kerry Hill (a Welsh breed), the Shetland, which are deer-like in appearance, and are only suitable for a park, the Dartmoor, Black-faced Highland and others.

In furtherance of the work of its textile department, Leeds University some time ago purchased a small flock of wild Soay sheep, the most primitive breed of the British Isles, and has set itself to preserve it, as, in the opinion of Prof. Ewart, of Edinburgh University, the time will come when the fancy sheep breeder will have to return to the primitive breeds of sheep for stamina, and it would be a great misfortune for Great Britain if such primitive breeds were not available.

Unfortunately sheep which can take a 10-foot fence, as well as creep through one, and climb, are more than difficult to retain within bounds, and the university is still in need of safe pasturage for its small flock.

\*These are the leading breeds in California. For list of Sheep Breeders' Associations, see Appendix C.

## Wool, Mutton and Dogs.

Wool and mutton are commanding higher prices than ever before, and supplies of wool are being depleted so rapidly that it will take some time after peace is declared to restock the wool trade.

The sheep-killing dog constitutes one of the greatest menaces to the success of the sheep industry.

The dog not only kills sheep but keeps out of the sheep business men who are otherwise inclined to engage in it.

The most effective method of dealing with the sheep-killing dog is through efficient legislation.

Notable progress has been made by several states in enacting good dog laws, and others are expected to take similar action.

No law, however well worded it may be, can be effective unless it is enforced and has the moral support of the people who are affected by it. Uniform state dog laws are desirable.

Thousands of sheep are ruthlessly killed every year by dogs, causing a loss of considerably more than a million dollars. Nevertheless the greatest setback which the dog causes to the farm sheep industry as a whole consists in keeping out of the business men who otherwise would engage in it. No farmer who wants to raise sheep would attempt it while his neighbors' flocks are being killed outright or chased to death. The moral effect upon all persons who have seen sheep which have been wantonly destroyed or maimed by dogs is even more destructive to the industry than is the actual damage sustained. The humanitarian point of view alone should be of sufficient import to cause steps to be taken to put a stop to the depredation of the dog.

All male dogs in the state which are over four months old are subject to a tax of \$1, and all females over four months of age, \$3. The dogs are listed by the assessors and taxes collected as other taxes. For each additional male there is a tax of \$2. Dog owners are held liable for damages and costs of suit for all sheep, goats, or poultry killed or injured. It is not necessary for the dog owner to have had previous knowledge that the dog would worry, kill, or wound sheep. If the dog is found in the act it may be killed at the time by anyone and the owner of the dog has no recourse. No provision is made for compensation to sheep owners unless the owner of the dog is known or is ascertained.—(1872. Civil Code, 1915.)

A bill introduced into the last legislature to give further protection to sheep by restricting dogs failed to pass.

The following statement shows at a glance the changes that have taken place in the number of domestic animals during the last sixty years:

Summary of the Number of Domestic Animals, 1850-1910.

Year	Horses and colts	Mules and colts	Cows and calves	Other cattle	Sheep and lambs	Swine
1850	21,719	1,666	4,280	258,379	17,574	2,776
1860	160,610	3,681	205,407	974,735	1,088,002	456,396
1870	192,273	17,533	164,093	467,305	2,768,187	444,617
1880	237,710	28,343	210,078	604,966	5,727,349	*868,419
1890	*455,073	*53,627	317,201	*1,291,217	3,373,036	*594,009
1900	421,293	56,190	307,245	*1,137,379	2,803,509	598,336
1910	468,886	69,761	467,332	1,609,693	2,417,477	766,551

Prior to 1890, asses and burros were included with mules.

\*Including estimated number of range animals separately reported.

Harkness 10 (17087), and Calla Grove Farm 34 (46236), Champion Hampshire Ram and Ewe, State Fair, 1918.  
Owned by Calla Grove Farm, Manteca, California.

## GOATS.

The Angora goat, a native of Asia Minor, was introduced into this country in 1849, and has been bred extensively in the United States. It crosses readily with the common goat, and the cross-breed frequently becomes the foundation of a good flock of fleece-bearing animals. The common goat has often been described as the poor man's cow. The Angora goat has been found to be of great service in clearing land of brush and low growths that sheep and cattle will not touch. The meat of the kids is said to be fully equal to the best young lamb, from which it is difficult to distinguish it. Angoras are among the most useful of domestic animals. Their fleeces, called the mohair, furnish material for the manufacture of some of the finest fabrics, their flesh is exceedingly delicate and nutritious, and their milk is richer than that of a cow.

The number of goats of all kinds in 1910 was 138,000, the lead being taken by Tehama County, with 28,000, and Shasta, with 18,000. Lake and Mendocino counties lead in Angora goats, having upward of 5,000 each.

## Selection of Goats for the Range.

The goats on the ranges today are generally of two breeds—the Angora and the common, which is sometimes called the Mexican or Spanish-Maltese. In certain places near ranches a few head of the true milch breeds graze on the range. The Angora is by far the most important on the ranges both in numbers and the value of its products, and without doubt the principal increase in goats on the ranges will be in Angoras.

The production of milk goats has for a great many years been an important feature of the live-stock industry in many European countries, but it has never secured a very strong foothold in the United States. In this country the goat has always been an animal of more or less ridicule, as the majority of the people do not realize the possibilities of certain breeds or types that have been bred for many years along definite lines.

In continental Europe milk goats are largely used by families unable to keep a cow, and great benefit is derived from having fresh milk at hand and at a low cost.

During the past several years considerable interest has been manifested in the milk-goat industry in this country. The fact that the milk-goat will supply sufficient milk for the average family and can be kept where it would be impossible to keep a cow is beginning to appeal to many people, especially those living in the small towns and the suburbs of the large cities.

## Breeds of Goats.

*Saanen*.—The Saanen is one of the leading breeds and takes its name from the Saanen Valley of Switzerland. It is said to be the largest of all the Swiss breeds. Although considered a hornless breed, occasionally an animal is found with horns. The color ranges from a pure to a creamy white. The dairy conformation is especially well developed in the Saanen breed. The hair is usually short, with the exception of a strip along the spinal column extending to the flanks and the hind quarters.

The first record of the importation of Saanen was in 1904, when 10 head came in through the Canadian quarantine.

The Saanen is without question one of the most beautiful and valuable breeds, and as the supply of pure-breeds is very limited in this country it will be necessary to grade up herds from common stock by using Saanen bucks of the best breeding obtainable.

*Toggenburg.*—The Toggenburg is one of the leading breeds of Switzerland and takes its name from the Toggenburg Valley, where they have been bred for a great many years. Although generally considered a hornless breed, occasionally one is found with horns. The color of the Toggenburg is brown with a light stripe or bar down each side of the face. The legs below the knees and hocks are light gray or almost white. The wattles or appendages, two in number, attached to the under side of the neck, are very characteristic of this breed.

The first record of importations of the Toggenburg into the United States was in 1893, when W. A. Shafor, of Hamilton, Ohio, imported 4 head from England. In 1904 F. S. Peer imported from Switzerland for other persons 16 head, which later became widely distributed. The largest importation of milk goats ever made to this country was in 1905, when R. N. Riddle, of New Jersey, imported 119 Toggenburgs.

Owing to the fact that Toggenburg goats are more plentiful in this country than other breeds, a good many grade goats of the Toggenburg type are found in various parts of the country. In fact, many herds have been established by crossing Toggenburg bucks upon does of the common American type.

*Nubian.*—The Nubian, although considered a valuable breed, is found in but small numbers in this country. It is a native of Nubia, Upper Egypt, and Abyssinia. Its important peculiarities consist in the length of the large drooping ears and the shape of the head. The Nubian is considered a hornless breed, but bucks occasionally develop horns. It is one of the largest breeds of goats. The hair is short and fine, and owing to this condition this breed is less hardy than the leading European breeds and can not stand extreme cold. The color is black, dark brown, or tan, with or without white markings. Pure-bred Nubian bucks are said to be free, or nearly so, of the odor so prevalent in the males of other breeds.

The Nubian breed is very prolific and one of the best for milk production.

*Maltese.*—Although considered a valuable breed of milk goat, the Maltese is of no special importance at the present time in this country, except that it has had some influence on the type of goats in the Southwest. As the name signifies, it is a native of the Island of Malta.

This breed is kept in large numbers on that island. It is usually hornless, but occasionally one is found with horns. The ears are rather long and are carried horizontally. The udders are quite large and in many instances almost touch the ground. The hair is rather long, the color being white and reddish brown or black. For milk production this breed is considered one of the best.

*Common, or American.*—Either of the names "Common" or "American" may be applied to a large number of short-haired goats found in many sections of the United States, especially in the south. In many sections these goats have been bred for a great many years without the introduction of outside blood, so that in general conformation they are very uniform.

**Highlander (50041).** Grand Champion Chester White Boar. California State Fair, 1918. Owned by Highland Stock Farm, Fair Oaks, California.

They are of medium size and somewhat short legged, rather meaty in appearance, and do not show the conformation of the Swiss breeds. This type of goats is of various colors; brown of various shades, brown and white, black and white, bluish gray, and white predominate.

Owing to the scarcity of good milk goats, the common or American type properly selected offers a good foundation for grading up with either the Toggenburg, Saanen, or Nubian breeds.

#### Milk Goat Industry.

The milch-goat industry is only in its infancy in America. This type of goat is adapted to our country, and the industry should become of greater importance every year. There are many different breeds of milch goats, but comparatively few of these are represented in California, the largest number being the Toggenburg, Saanen and Anglo-Nubian. A great variety of crosses and numerous goats of no particular breeding are also found. The Toggenburg is at the present time the most numerous in this state. The first two are Swiss breeds; the latter from England, originally made up of the English goat, the Nubian and the lop-eared goats of India. This breed has been bred in England for many years. Homes Pegler, the best known authority on the milch goat, in his late book, "The Book of the Goat," has this to say: "The Toggenburg may be said to be the most popular breed of goat in England at this moment, as indeed it has been for some years. This is due to two important qualities—its great milking capacity and its docile, kindly nature. Any one visiting a herd of goats of various sorts amongst which there are Toggenburgs, will generally find that whilst the others move off at the approach of strangers, the Swiss will come up to be patted, and will feed readily from the hand. In regard to its milking qualities a great deal could be written."

#### SWINE.

The swine introduced into the United States by the early colonists were of inferior stock. Between 1818 and 1830, the Chester White was evolved. The Berkshire was introduced from England about 1830, but did not come into general favor until 1870 to 1880. The Poland-China originated in Ohio between 1838 and 1840. Other breeds are Yorkshires and Hampshires. The interest in swine breeding in recent years is illustrated by the dates of first registration of the different swine breeders' associations, which were as follows: American Berkshire, 1875; Standard Poland-China, 1877; Central Poland-China, 1879; American Chester White, 1884; American Essex, 1887; American Duroc-Jersey and Standard White, 1890.

As a result of this interest, swine in this country have attained a high standard, with regard to form, bone, and line of maturity.

There are two distinct types of swine, the lard and the bacon types. Swine of the lard type far outnumber those of the bacon type in the United States. The lard type is preferred by the people in this country, consequently the majority of feeders produce the rapid fattening, heavily fleshed lard type.

The bacon type is not raised extensively in the United States. The production of choice bacon is more general in those countries where the feed of the hog is more varied and where corn is not relied upon as the principal grain for hogs.

The principal breeds of the lard type are the Poland-China, Berkshire, Chester White, Durco-Jersey, and Hampshire.

The principal breeds of the bacon type are the Tamworth and the Large Yorkshire.

Pork constitutes more than one-half of all the meat produced in the United States, and it is the mainstay of the ration of the laboring man and the soldier.

#### RECOGNIZED BREEDS OF DOMESTIC ANIMALS.

##### Cattle.

Aberdeen-Angus.	Guernsey.	Kerry and Dexter.
Alderney.	Hereford.	Red Polled.
Ayrshire.	Highland.	Shorthorn.
Devon.	Holstein-Friesian.	Sussex.

\*Average.

## Sheep and Wool, Goats and Mohair in 1909-1910.

According to the Census Bureau, the total number of sheep of shearing age in California on April 15, 1910, was 1,525,000, representing a decrease of 11.6 per cent as compared with the number in 1900. The approximate production of wool during 1909 was 2,563,000 fleeces, weighing 14,065,000 pounds and valued at \$2,424,000.

Although 1,714 farmers reported 138,413 goats and kids on their farms in 1910, only 367 reported the production of goat hair or mohair during 1909. These farmers reported 102,134 fleeces, weighing 282,596 pounds and valued at \$60,821. The production shows a considerable increase between 1899 and 1909, but it is believed that the figures are somewhat short of the actual production.

*Goat Hair and Mohair 1909 and 1899.* Although 1,714 farmers reported 138,413 goats and kids on their farms April 15, 1910, only 367 reported the production of goat hair or mohair during 1909. These farmers reported 102,134 fleeces, weighing 282,596 pounds and valued at \$60,821. The production showed a considerable increase between 1899 and 1909. Many farmers who have goats do not produce goat hair or mohair, but it is believed that the report is somewhat short of the actual production.

Under the encouragement of a 15 per cent duty the production of mohair has probably increased, especially in Texas. The total production in the United States for 1917, is estimated at 6,000,000 pounds, which is the same as in recent years. Texas, Oregon, New Mexico, California, and Arizona are the principal sources of supply of domestic mohair.

**\*WOOL, 1915-1918.**

The following estimates are taken from the annual report of the National Association of Wool Manufacturers, Boston:

	1915	1916	1917	1918
Number of fleeces.....	1,900,000	1,850,000	1,740,000	1,792,000
Average weight of fleeces, pounds.....	6.1	6.3	7.0	7.0
Per cent of shrinkage.....	64	64	64	64
Wool product, raw, pounds.....	11,590,000	11,600,000	12,180,000	12,145,000
Equivalent quantity of scoured wool, pounds.....	4,172,000	4,176,000	4,384,000	4,526,200
Average value per scoured pound, October 1.....	\$0.65	\$0.83	\$1.50	\$1.50
Total value October 1.....	\$2,711,800	\$3,466,080	\$6,576,000	\$6,789,300

\*Number of fleeces.

The comparative prices of California wool at Boston has been as follows on the scoured basis, per pound:

**\*PRICES OF WOOL (Oct.), 1905-1918.**

Year	Cents*		Year	Cents*	
	Spring	Fall		Spring	Fall
1905.....	74	62	1912.....	54	45

## PART IV.

## POULTRY, DAIRY PRODUCTS, BEES AND HONEY.

**Poultry Varieties; Turkeys, Ducks, Geese, Guinea Fowls; Ostriches; Eggs, Cheese and Butter; Bees, Honey and Wax; Butter and Cheese by Counties in 1910; Production, 1850-1910; Condensed Milk 1906-1918; Value of Dairy Products, 1917-1918; Production of Honey, 1908-1918; Bees, Beeswax and Honey by Counties, 1910; Imports and Exports of Honey and Beeswax, 1908-1918.**

## POULTRY.

"One hundred hens on every farm—one hundred eggs from every hen," is the motto of the United States Department of Agriculture. Meat can be produced from poultry more quickly than from any other source.

With the exception of the turkey, all the different species of poultry now kept on American farms are of European or Asiatic origin. The fowl, or chicken, is unquestionably of Asiatic origin.

## VARIETIES.

The chickens of the United States may be divided into the following classes:

*The American class includes the—*

Plymouth Rock  
Wyandotte  
Java  
American Dominique  
Jersey Blue  
Rhode Island Red

*The Asiatic class—*

Brahma  
Cochin  
Langshans

*The Mediterranean class—*

Leghorn  
Minorca  
Andalusian  
Spanish  
Anconas

*The Polish class—*

White Crested  
Black  
Golden  
Silver  
White and Bearded Golden  
Bearded White  
Bearded Silver  
Buff Laced

*The Dutch or Hamburg class—*

Hamburgs

*Continental—*

Silver and Gold Campines

*French class—*

Houdans  
Creveceurs  
La Fleche

*Game and Game Bantam class—*

Black-breasted Red  
Brown Red  
Golden and Silver Duckwing  
Red Pyle  
White, Black, Birchen, Cornish, and  
Indian Games  
Malays

*Bantams other than Game—*

Bebrights.  
Rose Combed  
Booted  
White  
Cochin  
Japanese  
Polish

*English class*

Dorkings  
Orpingtons  
Red and Speckled Sussex  
Red Cornish  
Red Caps

*Miscellaneous class*

Russian  
Sumatra  
Silky  
Sultan  
Frizzles  
Rumples  
Yokohama  
Naked Neck

Classified according to their prominent characteristics, they may be divided into four classes. The egg breeds, which are the greatest egg producers, are the Leghorns, Spanish, Minorcas, and Hamburgs.

The meat breeds, whose chief value is as meat producers: Brahma, Cochin, and Langshan. The general utility fowls furnish fair quantities of eggs and meat. The Plymouth Rock and Wyandotte belong to this class.

The fancy breeds are reared chiefly on account of their appearance: the Polish, Games, Bantams, and some miscellaneous breeds are the chief representatives of this class.

For general purposes the Plymouth Rock and Wyandotte are the most popular of all fowls, the Plymouth Rock in particular being in great favor. Hens of the medium-sized breeds—Plymouth Rocks, Wyandottes, Rhode Island Reds and Orpingtons—are best suited to back-yard conditions. Large hens kept in close confinement are likely to get too fat to lay well.

The American class includes the Plymouth Rock, Wyandotte, Java, Dominique, Rhode Island Red, and Buckeye.

The fowls of these breeds are commonly called general-purpose fowls, because they are not only good egg producers but their carcasses are also well suited for the table. They are therefore the breeds best suited for the general farm flock, and include some of the most popular and widely kept varieties of chickens. They are in good favor with the poultry packers on account of their table qualities.

All the American breeds lay brown-shelled eggs. They all have yellow skins and shanks free from feathers, which are desirable qualities for table fowl in this country.

In size they are intermediate between the smaller egg breeds, such as the Leghorns, and the larger meat breeds, such as the Brahmas. In temperament they are also intermediate, being less active than the egg breeds but more so than the meat breeds. They are fairly good foragers.

They mature earlier than the meat breeds, but not so quickly as the egg breeds.

They are sitters and make good mothers. Where they are kept, natural methods of incubation and brooding can therefore be used.

To meet these demands the farmer therefore desires a breed or variety of chickens which are not only good layers, but also have size enough to provide suitable carcasses for the table. The breeds which meet these two demands are commonly called the general-purpose breeds, and in the main are those comprising the American class as given in the American Standard of Perfection. The Orpington, belonging to the English class, is also a well-known general-purpose breed in this country. The general-purpose breeds are undoubtedly the most popular breeds in the United States. Certain of these, namely, the Plymouth Rocks, Wyandottes, Rhode Island Reds, and Orpingtons, compose the bulk of pure-bred poultry kept on the general farms, and their blood is evident in most of the farm flocks.

All of these birds are layers of brown eggs. In consequence, they are not as suitable for conditions where a premium is paid for white eggs; under such conditions where large poultry farms have been established, the White Leghorn has come to be the most popular fowl.

All the American breeds are clean legged; that is, they have shanks free from feathers. They also have yellow legs and skin, except the Java, in which the legs are black or leaden blue and yellow. In the markets of the United States the former is a desirable point, as the demand is for yellow skin and legs in table fowls.

#### Breeds and Varieties.

The American class includes the following standard breeds and varieties:

BREEDS.	VARIETIES.
Plymouth Rock-----	Barred, White, Buff, Silver Penciled, Partridge, Columbian.
Wyandotte -----	White, Buff, Silver, Golden, Partridge, Silver Penciled, Columbian, Black.
Java -----	Black, Mottled.
Dominique.	:
Rhode Island Red-----	Single Comb, Rose Comb.
Buckeye.	

*The Plymouth Rock.*—The Plymouth Rock has been for years the most popular breed in the United States. The Barred Plymouth Rock was the original variety and was developed in the United States, various lines of blood being used in the making. It is probable that the Dominique, the Black Cochins, the Black Java, the Brahma, and the Pit Game were used for this purpose. The size and type or shape of all the varieties of Plymouth Rocks are supposed to be identical.

The White Plymouth Rock is the second most popular variety of this breed. The Silver Penciled Plymouth Rock is one of the new varieties. Its plumage is distinctive and very beautiful. The Columbian Plymouth Rock and the Partridge Plymouth Rock are also a variety of comparatively recent origin, are very attractive in coloring and have proved quite popular.

*The Wyandotte.*—The Wyandotte is a rose-comb breed and is characterized as a breed of curves. The body is comparatively round and set somewhat lower on the legs than the Plymouth Rock. It is inclined to be a looser feathered breed, and its general shape and character of feathering gives it an appearance of being somewhat short backed and short bodied. The Wyandotte is a breed which also was developed in the United States, and has become very popular. The Silver Wyandotte was the original variety, and it is generally believed that the Dark Brahma, the Silver-Spangled Hamburg, and the Buff Cochins played a part in its origin. It is somewhat smaller than the Plymouth Rock. In the Golden Wyandotte the general color scheme is the same as in the Silver Wyandotte, except that the white of the Silver variety is replaced with red and reddish brown. The White Wyandotte is undoubtedly the most popular variety of this breed. In the Buff Wyandotte the color should be an even shade of buff throughout, being identical with that of the Buff Plymouth Rock.

*The Java.*—The Java is one of the oldest breeds developed in the United States. In general this fowl tends to be long in body and broad in back. The comb is single, and the legs of the Black variety are black, or black approaching yellow, while those of the Mottled variety are yellow and leaden blue. The color of the legs detracts somewhat

from the fowl for market purposes. The skin, however, is yellow. The hens are good layers of brown-shelled eggs, and the fowls are suitable for table purposes.

There are two varieties of Javas, the Black and the Mottled. The color of the Black Java is black throughout, with a greenish sheen on the surface plumage. Purple barring is undesirable. In the Mottled Java the plumage is a mottled black and white throughout, the black being more plentiful than the white. The undercolor of the Mottled Java is slaty.

*The Dominique.*—The Dominique is also one of the oldest of the American breeds. The Dominique color is associated in the minds of people throughout the country with the barnyard fowl and is frequently confused with the Barred Plymouth Rock color. The Dominique is somewhat smaller and somewhat slighter in body, with a tail somewhat longer and sickles more prominent, than the other American breeds. This breed has a rose comb and yellow legs and skin. The hens lay brown-shelled eggs and are good table fowls, although somewhat smaller than the other general purpose breeds.

*The Rhode Island Red.*—The Rhode Island Red is one of the newer breeds which have been developed in this country. At the present time it bears an excellent reputation among the farmers and is kept very extensively throughout the farming districts. The breed originated in Rhode Island, where it was developed by the farmers engaged in poultry raising. The Malay, Buff Cochins, Buff Leghorns, and Wyandottes are said to have been used in its development.

*The Buckeye.*—The Buckeyes are an American breed of comparatively recent origin. In type they approach somewhat to the Cornish, being erect and broad-breasted. This breed has a pea comb, which doubtless comes from the Cornish blood used in originating it. The hens lay brown eggs. In color Buckeyes are mahogany bay.

The turkey is an American bird. The wild turkey was once found all along the Atlantic coast, throughout Mexico, Central America, and the great interior plains of North America. The recognized varieties of the domestic turkey are the Bronze, Narragansett, White, Holland, Buff, Slate, Black, and Bourbon Red.

#### DUCKS.

The six leading varieties are the White Pekin, White Aylesbury, Colored Rouen, Black Cayuga, Colored Muscovy, and White Muscovy.

The most prominent breeds of geese are the Toulouse, African, Embden, Chinese, Wild or Canadian, Egyptian, East India, Gray Call, Buff, Swedish, Crested, and Runner.

The raising of poultry in California is carried on successfully and on a large scale, the center of this industry being at Petaluma, in Sonoma County.

## Poultry in California, 1880-1910.

	1880	1890	1900	1910	Value, 1910
Chickens -----	1,425,991	3,504,251	3,947,200	5,665,964	\$3,237,049

Ducks -----		157,514	62,293	40,061	28,325
Geese -----		37,659	28,419	14,195	18,609
Guinea fowls -----			<sup>1</sup>	2,920	1,993
Pigeons -----			<sup>2</sup>	246,065	69,254
All other fowls -----	184,176	482,972	249,068	378	1,923
Ostriches <sup>3</sup> -----			198	1,082	229,340
Totals -----	1,610,167	4,470,195	4,196,466	6,087,267	\$3,844,526

<sup>1</sup>Included with chickens. <sup>2</sup>Not reported.<sup>3</sup>For further details regarding the ostrich industry, see the Statistical Report of the State Board of Agriculture for 1913.

The farm value of poultry and eggs produced in California is about \$18,000,000, according to Mr. George H. Croley, president of the Federated Poultry Association. The leading poultry districts of the state, arranged in order of their importance and value of products, are as follows:

1. Petaluma district, including Santa Rosa and Sebastopol.
2. California south of Tehachapi—eight counties.
3. Hayward-Livermore, including the suburbs of the city of Oakland.
4. Santa Cruz-Watsonville-Salinas.
5. San Jose-Gilroy-Hollister (Santa Clara Valley).
6. Sacramento-Stockton.
7. San Joaquin Valley, excepting that portion included in District No. 6.
8. Sacramento Valley, excepting that portion included in District No. 6.
9. Sonoma-El Verano-Napa.
10. Santa Maria-Arroyo Grande.
11. Martinez-Concord-Walnut Creek (San Ramon Valley).
12. Northwestern Coast District.
13. Northeastern Mountain District.
14. Eastern Mountain District.

The industry is constantly extending, as the demand for poultry products greatly exceeds the home supply. Turkey-farming, as it is called, is mainly in the grain districts where the fowls can range. Hatching by incubators prevails generally.

An average chicken ranch near Petaluma consists of about five acres, upon which are placed 500 to 3,000 hens. There are, of course, quite a number of larger ranches which maintain 5,000 to 30,000 chickens. A person should have from \$3,000 to \$5,000 to equip a chicken ranch and get ready for a profitable business. In case of renting, however, about \$1,500 is needed to start the prospective poultryman. The average profit on each hen is about \$1 per year.

Notwithstanding the remarkable development of the poultry business in various parts of the state, the increase is not sufficient to meet the demands of the immediate market. The rapidly expanding population of the state requires the importation in season of about 425 carloads of live and 75 carloads of dressed poultry to San Francisco and Los Angeles, besides several million dozen eggs each year from Eastern points, and there is no immediate prospect of the home supply overtaking the market. This fact insures the success of all practical poultrymen who engage in the industry in California.

California, in 1917, produced poultry products valued at about \$35,000,000, approximately one-half of which came from this district or

Sonoma County. This district's production of eggs was about between twenty-five and thirty million dozens, while the poultry output was about 175,000 dozens. About 20,000 persons are either directly or indirectly employed in this poultry industry in this county. This represents about 40 per cent of the population.

#### Eggs.\*

The production of eggs in California in 1909 was 41,022,000 dozen, valued at \$10,263,000.

Numbers of eggs	Dozens	Value
In 1899 -----	24,443,540	\$3,864,679
In 1909 -----	41,022,395	10,262,694
Increase, 1889 to 1909 -----	16,578,855	6,398,015
Per cent of increase -----	67.8	165.6

#### THE OSTRICH INDUSTRY, 1910.

In January, 1910, there were at least 6,100 breeding or feather-producing ostriches in this country, of which Arizona had 80 per cent, California 17 per cent, Arkansas 2 per cent, the small remainder being in Texas and Florida. There are ostrich farms at Pasadena, Sacramento, and Brawley, in Imperial County. More than thirty-five years ago the first ostriches were brought from Africa to California by Edwin Cawston and the ostrich farm at Pasadena established. An ostrich weighs as high as 300 pounds, and produces eggs which frequently weigh as much as five pounds. These huge ivory-colored eggs are sometimes hatched by the incubator process, or by the mates who take turns on the nest, the males at night and females during the day.

The question of the nature of the country most favorable for ostriches is largely affected by the kind of vegetation peculiarly suited to the soil, which in turn is undoubtedly affected by the amount of rainfall. Alfalfa pasture makes an ideal run for the birds, furnishing a large percentage of their food; hence a soil which is or can be made suitable for alfalfa is one of the essentials to success in ostrich farming. A dry sandy soil, made suitable by drainage and irrigation for raising alfalfa, has proved best adapted to successful ostrich farming. Such a soil is generally peculiarly adapted for raising large crops of alfalfa, and makes an ideal soil for an alfalfa pasture. Under such conditions it is essential to have some shade.

The demand for information concerning ostriches indicates that the number of individuals who are interested in ostrich farming is increasing.

The profit to be derived from the business will depend on the management, on the success secured in the raising of the young birds, and on the production of feathers of good quality. The average yearly yield of feathers from an ostrich is 1½ pounds. Birds produce from 12 to 20 ounces of feathers at each plucking, with an average of 16 ounces.

There were nine ostrich farms, returning 974 ostriches, valued at \$224,000 in 1910. There were also reported peafowls valued at \$1,431, pheasants valued at \$342, and India Jungle fowls valued at \$150. The number of farms reporting poultry increased 10,772 since 1900.

\*The center of the poultry industry in California is at Petaluma in Sonoma County.

## The South African Ostrich Industry, 1911-1918.

Only five years ago the ostrich was the most pampered and highly valued possession of many South African farmers. Now there is little interest even in the most perfect of these birds.

A pair of the best breeding ostriches easily sold for \$5,000. Super prime feathers (*i. e.*, perfect white wing feathers from the cock bird) brought \$120 to \$140 a pound on the public market in South Africa. Today the best feathers produced could probably be purchased for \$50 or \$60 a pound.

It was in the late sixties that the commercial aspect of the ostrich plume presented itself to the South African farmer. From a very small beginning the business developed into a trade amounting to millions of dollars annually, but met with a check in 1914 and now there is an almost complete cessation of demand for feathers.

Since the slump in the ostrich-feather market occurred in 1914, making it unprofitable to raise ostriches for their feathers alone, schemes have been devised in this country to minimize the losses to ostrich farmers, many of whom had no other capital than their flocks of these giant birds.

The eggs of the ostrich have long been a staple product on the market of Port Elizabeth and other ostrich centers, and have been mixed with hens' eggs by bakers in the manufacture of cakes and pastry.

Since April, 1918, when the last shipment of feathers went to America, the prices on good quality wings have increased about 200 per cent and on shorts about 100 per cent. At the sale of November 25-26, the ruling prices for unassorted parcels were:

Description	Price per pound	Description	Price per pound
Whites:		Drabs:	
Good average -----	\$24 33-\$36 50	Good length -----	\$2 19-\$4 87
Ordinary -----	12 16- 21 90	Ordinary -----	36- 2 32

## DAIRY PRODUCTS.

Before the war the United States received dairy products from no fewer than 24 foreign countries; now these supplies have largely ceased and it has become necessary not only to replace them at home but also to export large quantities.\*

The greatest single item of our dairy exports is condensed milk, which now is meeting an unprecedented demand for both army and civilian consumption abroad. In 1914 the imports and exports of this commodity were about equal; that is, we imported about the same quantity we exported. Neither was a very important item in our trade. In 1914 16,209,082 pounds of condensed milk were exported, but in 1918 this had increased to the enormous figure of 528,759,232 pounds, and the value for the same period increased from \$1,341,140 to \$68,045,904.

In the period before the war the major part of the dairy imports consisted of fancy cheese from Italy, Holland, France, Greece, and Switzerland. During 1914, 63,784,313 pounds of cheese were imported, while exports consisted of 2,427,577 pounds. In the fiscal year 1918 the imports of cheese dropped to 9,839,305 pounds, while exports rose to 44,303,076 pounds.

Dairy products in general are somewhat less accurately reported than the principal crops. This is particularly the case as regards the quantity of milk produced. Less than one-third of the milk produced was sold as such. Large quantities of milk and cream were sold on the butter fat basis. The butter made on farms in 1909 was valued at \$4,086,000.

Dairy Products and Their Value.  
(From Report of Census Bureau.)

Dairy cows and products	Number	Value
Dairy cows on farms, April, 1910.....	467,332 head	-----
On farms reporting dairy products in 1909.....	408,812 head	-----
On farms reporting milk produced in 1909.....	315,385 head	-----

## Breeds of Belgian Hares and Rabbits.

Flemish Giants, Belgian Hares, New Zealand Hares, Dutch Rabbits, American Giants, French Silvers, Himilayas, English, Angoras, Lop Ears, American Blues.

## Breeds of Pigeons.

Archangels, Barbs, Blondinettes, Carneaux, Carriers, Dragoons, English Pouters, Exhibition Homers, Fantails, Helmets, Ice Pigeons, Jacobins, Long Face Tumblers, Magpies, Modenas, Mondains, Nuns, Parlor Tumblers, Pigmy Pouters, Polish Lynx, Record Homers, Runts, Russian Trumpeters, Satinettes, Scandaroons, Show Homers, Strassers, Swallows, Owls, Taped Hungarians, Turbits, White Kings, Maltese.

\*The duty on imported butter is 2½ cents per pound, and on cheese 20 per cent ad valorem on October 4, 1913, and after.

## CHEESE AND BUTTER.

The production of cheese and butter, as given by counties by the Census Bureau, is that made on farms only. The production by creameries in 1909 was 37,283,450, and full cream cheese 1,567,640 pounds. The decrease from 1904, when it amounted to 3,601,051, is, no doubt, due in part to the increasing practice of separating the cream on the farm, as it is now more profitable to sell the separated cream to the butter factories. The figures issued by the State Dairy Bureau are also given. The cheese produced is, with a few exceptions, only that made by the ordinary Cheddar process. There is a considerable amount of fancy and handmade cheese which has not been reported. That the production of cheese in the state is far below the demand, is proved by the fact that more than double the amount manufactured in this state is received in the San Francisco market alone. We have the finest land for pasture and conditions favorable for the production of this article.

The amount of the output of cheese reported is much below the actual production in the state, and it is impossible to estimate it, as the owners of factories constantly change from making cheese to the production of cream. It has never been attempted to get a report on other than that made by the ordinary Cheddar process.

It has been demonstrated that a Cheddar type of cheese of the finest quality can be made in California, but most of the cheese made in this state is made for immediate consumption and is not suitable for exportation. There are, however, some factories in California that make cheese by the same process as is used in Oregon, Wisconsin and New York, and the quality of some of these brands is equal to any cheese made in the above-named states.

## Decrease in Production of Butter.

For many years there has been a steady increase in the production of butter of from one to eight million pounds a year and it has about kept pace with the increase in population. During the year ending September 30, 1917, there was a decrease of nearly one million and a half pounds and during the year ending September 30, 1918, there has been a further decrease of *over eight million pounds*.

The reports received from producers of cheese show a considerable increase over the production of former years. This may be partly accounted for because only 153 factories reported in 1916 while 167 reported in 1917 and 1918. Up to 1917 the law did not require factories making Monterey cheese or soft cheese to be recorded and reports were not received from some of these factories. The amount of cheese received in the San Francisco market in the year ending September 30, 1918, is several million pounds less than in the two previous years.

## DECREASE IN NUMBER OF HERDS.

Many of the dairies have gone out of business or have greatly reduced their herds. The reason given by the dairymen for discontinuing the dairy business was, first, that feed was scarce and high; second, that it was difficult to obtain milkers and difficult to keep them after they were obtained; and, third, because many other farm products have been very high during the last couple of years and after the land has

been pastured or has been in alfalfa a number of years, excellent crops of beans, potatoes, wheat and other grain can be produced on it, and as the profits from such crops were greater at this time, the labor less confining and less monotonous, many of the dairymen plowed up their pastures and alfalfa and planted crops.

The year 1918 up to September was very dry and the prospect for feed at reasonable prices was not very good, therefore, there was very little sale for cows except for slaughter. After the rain in September, however, the demand for milk cows became very brisk and if some of the milkers who have joined the Army and Navy will soon return to the dairy ranches we shall soon have a normal or increased production of dairy products.

The price of butter and other dairy products has been very high but not in comparison with many other necessities of life and not as high as in the Eastern cities. On November 21, 1918, the producer received for his butter, delivered in San Francisco, 58 cents. In New York and Philadelphia on the same date he received for the same grade of butter 66 cents and 66½ cents.

The dairymen who sold their cows and went out of the dairy business have undoubtedly made a great mistake, as everything points to good prices for some years to come. A great many of the cows in Europe have been slaughtered for want of feed and because meats and fats were exceedingly scarce.

TABLE XXI.

## Butter and Cheese Produced on Farms. 1910.\*

## Receipts of Butter in San Francisco, 1908-1918.

Year	Pounds	Year	Pounds
1908 -----	14,610,522	1914 -----	22,580,950
1909 -----	14,328,000	1915 -----	27,323,500
1910 -----	13,934,200	1916 -----	27,877,700
1911 -----	19,033,600	1917 -----	25,362,500
1912 -----	23,548,850	1918 -----	24,529,500
1913 -----	23,905,100		

The following are the average prices of butter and cheese in San Francisco during the ten years ending September 30, 1918:

(Cents per pound.)

Year	Butter	Cheese	Year	Butter	Cheese
1909 -----	30.00	14.30	1914 -----	27.61	15.79
1910 -----	31.30	15.60	1915 -----	28.70	14.10
1911 -----	28.00	14.50	1916 -----	27.39	15.54
1912 -----	30.77	15.46	1917 -----	37.07	19.78
1913 -----	32.12	16.06	1918 -----	45.07	23.38

## BEES, HONEY, AND WAX.

In the earlier years the parent stock of the honey bee in this country was the common brown or black bee of Germany. In 1860 the Department of Agriculture introduced the Italian bee, about twenty years later the Cyprian, and still later the Carniolan.

## Summary of Honey and Wax, 1860-1910.

(From census reports.)

Year	Honey, pounds	Wax, pounds	Year	Honey, pounds	Wax, pounds
1860 -----	12,276	584	1890 -----	3,929,889	60,237
1870 -----	294,326	4,903	1900 -----	3,667,738	115,330
1880 -----	574,029	14,672	1910 -----	10,264,715	126,445

The number of farms reporting bees decreased from 6,915 in 1909 to 6,870 in 1910, while the colonies of bees increased from 129,444 to 201,023, or 55.3 per cent, and the value increased from \$363,885 to \$729,793, or 100.6 per cent.

In 1917 the honey crop of California amounted to 296 carloads or 8,900,000 pounds. The highest price paid to producers was about 18 cents per pound, and the lowest about  $4\frac{1}{2}$  cents a pound, but the average price obtained by the beekeeper was about 9 cents a pound for extracted honey. For comb honey the average price approximated 14 cents per pound. Of the 296 carloads of honey produced, 280 were extracted honey and the balance comb. The total value of the honey produced in the state amounted to about \$950,000.

In 1918 practically all kinds of honey were in smaller than normal production, with the possible exception of orange honey, which was a fairly good crop, considering the cold weather during the blooming period. Sage honey was a very short output indeed, and the alfalfa honey production is estimated as having been only about 50 per cent of a normal production.

California is the leading honey state and owes its pre-eminence to three principal sources of supply—the alfalfa of the valley sections, the wild sage and the wild buckwheat shrub of the southern hills and mountains, and the citrus groves. The mountain sages of California produce a type of honey of much importance commercially and by common consent one of the finest of all in color (white), density, and flavor. The sage honeys possess, in addition to other virtues, the important one of not granulating readily. Honeys from the desert plants other than sage are as a rule good; many are excellent and rarely are they of poor quality.

Orange honey ranks high among the commercial honeys, being produced in large quantities in California.

Honey is produced in three principal forms: First, comb-honey in 1-pound sections, as commonly retailed; second, extracted or liquid honey, ordinarily removed from the comb by means of a centrifugal machine, although sometimes by crushing the comb and draining, or by pressing it, although this last procedure is likely to produce an inferior product; third, "bulk" or "chunk" honey, the comb honey more or less broken and mixed with the liquid honey.

## Production of Honey, 1908-1918.

Year	Pounds	Year	Pounds
1908 -----	5,250,000	1914 -----	7,900,000
1909 -----	10,500,000	1915 -----	9,300,000
1910 -----	4,500,000	1916 -----	10,600,000
1911 -----	5,600,000	1917 -----	8,900,000
1912 -----	4,800,000	1918 -----	6,500,000
1913 -----	3,200,000		

## CALIFORNIA HONEY CROP, AND IMPORTS AND EXPORTS OF HONEY AND WAX, 1908-1918.\*

(Duty on imported honey, 10 cents per gallon.)

Year	California, crop, pounds	Exports of domestic honey, value	Imports, gallons	Value
1908 -----	5,250,000	\$78,102	211,992	\$98,425
1909 -----	10,500,000	85,578	145,691	60,884
1910 -----	4,500,000	159,401	103,640	52,968
1911 -----	9,500,000	81,649	112,553	62,942

## PART V.

### FARM CROPS.

**Farm Crops 1910: Cereals: Barley, Buckwheat, Corn, Oats, Rye, Wheat; Potatoes; Broom Corn; Hay; Sugar Beets; Cotton in Imperial Valley, 1909-1918; Cotton in San Joaquin Valley, 1918; Silk in Butte County; Rice and Hops; Farm Crops, 1918; Value of All Crops; Farm Crops by Counties.**

In comparing one year with another, it should be borne in mind that acreage is, on the whole, a better index of the general change or tendencies of agriculture than either the quantity or the value of the crops, since variations in quantity may be due largely to temporarily favorable or unfavorable climatic conditions, and variations in the value of the crops are largely affected by changes in prices. The acreage in fruits and nuts can not be given, as the extent of the industry has always been calculated by the number of trees only.

Crops	Acreage, 1909	Value
Cereals .....	1,970,492	\$28,039,826

<sup>1</sup>Pounds. <sup>2</sup>Bales.

## SIZE OF CEREAL CROPS IN CALIFORNIA.

The acreage sown to wheat and other cereal crops in California has greatly decreased in recent years, the land being devoted to orchards and vineyards, which yield a much higher profit.

## Barley.

California has held the first place in the production of barley for a number of years, as far back as the year 1852. The area in barley has been upwards of 1,000,000 acres since 1901, the largest area being in 1910, with 1,195,000 acres, which produced 46,500,000 bushels, or the largest on record. In 1917 the acreage was 1,350,000 and the production 39,150,000 bushels, and in 1918 1,320,000 acres, and the production 34,320,000 bushels.

## Buckwheat.

This crop has never been grown to any extent in California; therefore, the production being so small, regular records have not been kept. The area under cultivation is but a few hundred acres, and the production from 10,000 to 15,000 bushels.

## Corn.

Corn has also fallen off; the acreage was between 100,000 and 161,000 in former years, the highest production being in 1891, when it amounted to upward of 5,570,000 bushels.

In the United States, corn is grown more widely than any other crop. It is grown to some extent in every state in the Union. The acreage in the United States usually exceeds the combined acreages of wheat, oats, barley, rye, buckwheat, and rice. Annual production ranges from 2,500,000,000 to 3,000,000,000 bushels, or slightly exceeding the combined yields of the cereals just mentioned. The value is far in excess of any other crop. With the possible exception of cotton, corn is the most important and irreplaceable crop in the agriculture of this country.

During the last three years the crop in the United States was almost equally divided between white and yellow corn, the mixed corn being only a small proportion.

Grade of corn and year	Bushels	Per cent of crop
White—		
1916 -----	1,106,000	54
1917 -----		60
1918 -----	1,815,000	61
Yellow—		
1916 -----	922,000	45
1917 -----		36
1918 -----	892,000	30
Mixed—		
1916 -----	20,000	1
1917 -----		4
1918 -----	268,000	9

The corn crop is distinctly an American crop, about 75 per cent of the "world" yearly production of approximately three and a half billion bushels being grown in the United States. What becomes of this vast quantity of corn is frequently asked. Answers to inquiries sent to crop correspondents of the Bureau of Statistics of the United States Department of Agriculture permit some interesting deductions to be made upon this subject.

The disposition of the 513,000,000 bushels estimated as used in "towns" (as distinguished from "farm" consumption) was approximately as follows:

	Bushels	Per cent of total crop
Used in flour and grist mills (census).....	245,000,000	9.1
Used in the manufacture of glucose and starch.....	40,000,000	.5
Used in manufacture of distilled liquors, 1910.....	21,000,000	.8
Used in manufacture of malt liquors.....	14,000,000	.5
Used for feed in towns.....	120,000,000	4.4
Exported .....	45,000,000	1.7
Balance indefinite .....	28,000,000	1.0
Totals .....	513,000,000	19.0

#### Oats.

In oats the acreage has increased from 153,000 acres in 1900 to 192,000 in 1910 and 200,000 in 1916. Since that year it has declined, in 1918 the acreage was 175,000, and the production 5,600,000 bushels.

#### Rye.

Rye has always been a small crop in California, and the area and production have fallen off greatly in recent years, the acreage being 62,925 in 1900 and 7,027 in 1910. In 1916 the acreage was 8,000 and the production 104,000 bushels, and in the last two years none was reported.

#### Wheat.

In wheat the production decreased heavily between 1900 and 1910, in the former year the acreage being 2,771,000 and in the latter only 550,000. In 1917 the acreage was 375,000 and the production 7,425,000 bushels, and in 1918, 506,000 acres and the production 7,590,000 bushels.

#### Broom Corn.

This crop has never been grown to any extent in California. During the last thirty years more than 93 per cent of the brush produced in the United States was grown in 16 states. Oklahoma now leads in production. There are two varieties, the Standard and Dwarf. Nearly 75 per cent of the quantity produced, which is about 52,000 tons, is of the latter variety.

#### Potatoes.

The potato is the most important vegetable raised.

In 1917 the acreage was 105,000 and the production 15,225,000 bushels, and in 1918 90,000 acres, and the production 12,870,000 bushels.

The principal regions of California in which potatoes are grown at the present time are the Delta region, comprising parts of San Joaquin,

Sacramento, and Contra Costa counties; the Salinas Valley in Monterey County; the Napa and Sonoma valleys and the regions comprising parts of Santa Barbara, Los Angeles, and Riverside counties. The average yield per acre in these several localities differs widely, ranging from 4,500 to 12,000 pounds. While many varieties of potatoes have been tried in California, but few have been found well adapted.

#### Sweet Potatoes.

Next to the Irish potato, the sweet potato is the most extensively grown vegetable in the United States. In California it is not cultivated on a large scale. During the last three years the acreage has not varied, being about 6,000 acres and the production in 1918, 170,000 bushels.

#### Hay (Tame).

The acreage in hay during the last three years has fallen off. In 1917 the acreage was 2,400,000, and the production 4,800,000 tons; and in 1918 2,376,000 acres, and the production 2,970,000 tons.

#### Hay By Varieties 1916-1917.

	1916 (tons)	1917 (tons)
Timothy .....	44,000	101,000
Timothy and clover mixed.....	44,000	121,000
Clover alone .....	87,000	75,000
Alfalfa .....	1,838,000	2,237,000
Millet and Hungarian grass.....		5,000
Grains cut green for hay.....	2,056,000	1,714,000
Other tame hay.....	306,000	307,000
Wild, salt, and prairie hay.....	240,000	259,000
Total all hay.....	4,615,000	4,819,000

#### SUMMARY OF FARM CROPS, 1850-1910.\*

(Compiled from the reports of the Bureau of the Census.)

## SUMMARY OF FARM CROPS, 1850-1910\*—Continued.

Year	Potatoes		Hay		Hops	
	Acres	Bushels	Acres	Tons	Acres	Pounds
1850 -----		9,292		2,038		
1860 -----		1,789,463		305,655		86
1870 -----		2,049,227		551,773		625,064
1880 -----		4,550,565	758,024	1,045,119		1,444,077
1890 -----	38,178	3,664,920	1,431,574	2,218,285	3,974	6,547,338
1900 -----	42,098	5,242,596	2,339,601	3,035,266	6,890	10,124,660
1910 -----	67,688	9,824,005	2,533,347	4,327,130	8,391	11,994,953

\*When blank, the acreage or production, if any, was not reported.

## Value of Farm Crops by Counties in 1910.

The leading counties in the production of various crops according to the last census, classed according to value, are as follows:

## Cereals.

(Value of \$1,000,000 and upward.)

County	Value	County	Value
San Joaquin -----	\$3,238,000	Solano -----	\$1,292,000
Monterey -----	1,695,000	Madera -----	1,220,000
Merced -----	1,691,000	Yolo -----	1,032,000
Colusa -----	1,578,000	Tulare -----	1,442,000
Stanislaus -----	1,315,000		

## Hay and Forage.

(Value of \$1,000,000 and upward.)

Los Angeles -----	\$3,430,000	Stanislaus -----	\$1,424,000
San Joaquin -----	1,763,000	Tulare -----	1,362,000
Fresno -----	1,702,000	Merced -----	1,355,000
Riverside -----	1,624,000	Kings -----	1,171,000
Contra Costa -----	1,617,000	Sonoma -----	1,170,000
Santa Clara -----	1,587,000	Monterey -----	1,125,000
Alameda -----	1,547,000	San Diego -----	1,110,000

## Vegetables.

County	Value
San Joaquin -----	\$2,149,000
Los Angeles -----	1,255,000
Contra Costa -----	1,125,000

## THE BEST COUNTIES FOR CERTAIN CROPS.

The six leading counties in the production of cereals, hay and forage, potatoes, sweet potatoes, beans, peas, and other vegetables, and sugar beets are as follows, and this list may be taken to show the districts in which experience has proved that they are best suited. The acreage is that given in the last census in 1910.

## Barley.

County	Acreage	County	Acreage
San Joaquin .....	125,114	Colusa .....	89,985
Monterey .....	98,923	Merced .....	88,145
Madera .....	90,341	Stanislaus .....	57,529

## Corn.

Los Angeles .....	9,084	Tulare .....	2,527
San Diego .....	4,554	San Joaquin .....	2,547
Orange .....	3,054	Ventura .....	2,409

## Oats.

Stanislaus .....	38,546	San Mateo .....	16,125
San Joaquin .....	23,208	Madera .....	10,569
Merced .....	19,843	Santa Barbara .....	9,494

## Rye.

Merced .....	2,108	Lassen .....	526
San Joaquin .....	1,843	Modoc .....	406
Plumas .....	704	Siskiyou .....	306

## Wheat.

Tulare .....	66,567	San Joaquin .....	24,786
Madera .....	39,468	Monterey .....	22,924
San Luis Obispo .....	33,608	Stanislaus .....	22,068

## Kaffir Corn and Milo Maize.

Tulare .....	10,987	Kings .....	3,931
Imperial .....	9,789	San Joaquin .....	2,968
Stanislaus .....	4,448	Kern .....	2,813

## Hay and Forage.

Los Angeles .....	154,048	Fresno .....	95,265
San Joaquin .....	104,916	Contra Costa .....	88,937
Tulare .....	91,595	Riverside .....	88,430

## Potatoes.

San Joaquin .....	9,895	Los Angeles .....	2,799
Sacramento .....	5,036	Monterey .....	2,374
Sonoma .....	3,260	Alameda .....	1,854

## Sweet Potatoes.

Merced .....	780	San Joaquin .....	88
Los Angeles .....	218	Orange .....	75
Sacramento .....	117	Sutter .....	48

## Beans.

Ventura .....	53,744	San Joaquin .....	13,954
Santa Barbara .....	22,355	San Luis Obispo .....	11,169
Orange .....	21,186	Sacramento .....	7,801

## Peas.

County	Acreage	County	Acreage
Ventura .....	756	Alameda .....	215
Humboldt .....	517	San Mateo .....	186
Stanislaus .....	415	Monterey .....	154
San Joaquin .....	362		

## All Other Vegetables.

Los Angeles .....	13,385	Sacramento .....	6,367
Alameda .....	7,459	Santa Clara .....	4,241
San Joaquin .....	6,728	Orange .....	3,785

## Sugar Beets.

Ventura .....	14,333	Orange .....	10,275
Los Angeles .....	14,191	Monterey .....	9,900
Santa Barbara .....	11,320	Yolo .....	5,714

## RANK OF STATES BY ACREAGE IN THE PRODUCTION OF CROPS IN 1918

(Compiled from the Reports of the U. S. Department of Agriculture.)

## Barley (34 States) in 1918.

State	Acreage	Production, bushels	Average per acre, bushels
1. Minnesota .....	1,400,000	43,400,000	31
2. South Dakota .....	1,400,000	41,300,000	29.5
3. North Dakota .....	1,734,000	37,281,000	21.5
4. California .....	1,320,000	34,320,000	26
5. Wisconsin .....	711,000	25,383,000	35.7
United States .....	9,676,000	256,375,000	26.5

No barley is imported.

## Barley.

Barley exported, year ending June 30	Bushels	Value
1915 .....	26,754,522	\$18,184,079
1916 .....	27,473,160	20,663,533
1917 .....	16,381,077	19,027,082
1918 .....	26,285,378	41,650,886

## Buckwheat (24 States) in 1918.

State	Acreage	Production, bushels	Average per acre, bushels
1. Pennsylvania .....	325,000	5,850,000	18
2. New York .....	345,000	4,725,000	15
3. West Virginia .....	47,000	916,000	19.5
4. Virginia .....	38,000	798,000	21
5. Michigan .....	78,000	780,000	10
United States .....	1,040,000	17,182,000	16.5

No buckwheat is imported.

## Buckwheat.

Export of buckwheat, year ending June 30		Bushels	Value
1915	-----	413,643	\$396,987
1916	-----	515,304	481,014
1917	-----	260,102	350,606
1918	-----	5,567	10,347

## Corn (48 States) in 1918.

State	Acreage	Production, bushels	Average per acre, bushels
1. Iowa	10,434,000	375,624,000	36
2. Illinois	9,900,000	351,450,000	35.5
3. Indiana	5,138,000	169,554,000	33
4. Missouri	6,963,000	133,860,000	20
5. Ohio	3,700,000	133,200,000	36
United States	107,494,000	2,582,814,000	24

## Corn.

Year ending June 30	Imports		Exports (domestic)	
	Bushels	Value	Bushels	Value
1915	9,897,939	\$6,083,385	48,786,291	\$39,339,064
1916	5,208,497	2,865,003	38,217,012	30,780,887
1917	2,267,299	1,488,529	64,720,842	72,497,204
1918	3,196,420	3,483,101	40,997,827	75,305,692

## Oats (48 States) in 1918.

State	Acreage	Production, bushels	Average per acre, bushels
1. Iowa	5,466,000	229,572,000	42
2. Illinois	4,508,000	198,352,000	44
3. Minnesota	3,282,000	134,562,000	41
4. Wisconsin	2,364,000	110,162,000	46.6
5. Indiana	2,025,000	85,050,000	42
United States	44,400,000	1,538,359	34.6

## Oats.

Year ending June 30	Imports		Exports (domestic)	
	Bushels	Value	Bushels	Value
1915	630,722	\$290,180	96,809,551	\$57,469,964
1916	665,314	302,547	95,918,884	47,985,790
1917	761,644	473,476	88,944,401	55,034,981
1918	2,591,077	1,963,447	105,837,309	86,125,093

## Rye (38 States) in 1918.

State	Acreage	Production, bushels	Average per acre, bushels
1. North Dakota -----	1,945,000	20,422,000	10.5
2. South Dakota -----	575,000	10,350,000	18
3. Wisconsin -----	436,000	7,674,000	17.6
4. Minnesota -----	435,000	8,700,000	20
5. Indiana -----	410,000	6,765,000	16.5
United States -----	6,185,000	89,103,000	14.4

No rye is imported.

## Rye.

Exports of rye, year ending June 30	Bushels	Value
1915 -----	12,544,888	\$14,733,409
1916 -----	14,532,437	15,374,499
1917 -----	13,260,015	21,599,631
1918 -----	11,990,123	23,902,848

## Wheat (42 States) in 1918.

State	Acreage	Production, bushels	Average per acre, bushels
1. Kansas -----	7,248,000	102,608,000	14.1
2. North Dakota -----	7,770,000	101,010,000	13
3. Minnesota -----	3,799,000	79,710,000	21
4. South Dakota -----	3,765,000	71,305,000	18.9
5. Illinois -----	2,774,000	60,991,000	22
United States -----	59,110,000	917,100,000	15.5

## Wheat.

Year ending June 30	Imports		Exports (domestic)	
	Bushels	Value	Bushels	Value
1915 -----	426,469	\$469,847	259,642,533	\$333,552,226
1916 -----	5,703,078	5,789,321	173,274,015	215,532,681
1917 -----	24,138,817	41,900,498	149,831,427	298,179,705
1918 -----	28,177,281	56,873,063	34,118,853	80,802,542

## Potatoes (48 States) in 1918.

State	Acreage	Production, bushels	Average per acre, bushels
1. New York -----	380,000	34,960,000	92
2. Michigan -----	340,000	28,560,000	84
3. Minnesota -----	312,000	32,760,000	105

1917 -----	147,061,635	40,429,526	5,947,165	3,088,080,786	543,074,690
1918 -----	103,325,647	36,020,483	4,528,844	2,320,511,665	665,024,655

## Tobacco (23 States) in 1918.

State	Acreage	Production, pounds	Average per acre, pounds
1. Kentucky -----	475,000	427,500,000	900
2. North Carolina -----	400,000	282,000,000	705
3. Virginia -----	190,000	146,300,000	770
4. Ohio -----	115,600	113,288,000	980
5. Wisconsin -----	49,000	65,170,000	1,330
United States -----	1,549,000	1,340,019	865.1

## Tobacco.

Year ending June 30	Imports		Exports (domestic)	
	Pounds	Value	Pounds	Value
1915 -----	45,764,728	\$27,156,665	348,346,091	\$44,493,829
1916 -----	48,013,335	24,619,068	443,293,156	53,365,195
1917 -----	46,136,347	25,481,979	411,598,860	59,954,307
1918 -----	79,367,563	45,320,524	289,170,686	69,699,695

## GRAIN SORGHUMS.\*

Kaffirs, Milo Malze, Feterita (6 States) in 1918.

State	Acreage	Production, bushels	Average per acre, bushels
1. Texas -----	1,605,000	24,075,000	15
2. Kansas -----	2,139,000	20,107,000	9.4
3. Oklahoma -----	1,526,000	15,260,000	10
4. New Mexico -----	199,000	3,582,000	18
5. Colorado -----	92,000	1,748,000	19
6. Arizona -----	58,000	1,624,000	28

## Broom Corn (5 States) in 1918.

State	Acreage	Production, tons	Average per acre, tons
1. Oklahoma -----	140,000	16,100	0.115
2. Texas -----	74,000	19,200	0.260
3. Kansas -----	58,000	8,500	0.147
4. Illinois -----	31,000	9,000	0.290
5. Colorado -----	30,000	5,200	0.175

California also farms this crop to a lesser extent.

## Flaxseed (11 States) in 1918.

State	Acreage	Production, bushels	Average per acre, bushels
1. North Dakota -----	880,000	6,864,000	7.8
2. Montana -----	547,000	2,844,000	5.2
3. Minnesota -----	300,000	3,120,000	10.4
4. South Dakota -----	144,000	1,368,000	9.5
5. Kansas -----	41,000	205,000	5
United States -----	1,938,000	14,657	7.6

## Hemp (12 States) in 1917-1918.

In the production of hemp in 1917, Kentucky had 18,000 acres; Wisconsin, 7,000 acres; California and North Dakota, 5,000 each. The acreage in California has increased, being only 600 acres in 1915, and 1,600 in 1916. Seven other states have a few hundred acres each. In 1918 4,000 acres produced 2,500 tons near Stockton, in San Joaquin County. Kentucky supplies practically all of the hemp seed sown in this country. It is grown in seed plats along the Kentucky River. Hemp must be specially planted for seed production. In 1917, 9,635 tons were imported and in 1918 6,813 tons, most of which came from Italy and the Philippine Islands.

## Beans Now an Important Crop.

The acreage in beans in 1910 was 157,825, producing beans of the value of \$6,292,955; the acreage in dry peas was 2,959, valued at \$101,016.

Lima beans are only grown in any quantity in five counties, and have come into great favor in recent years. They were first cultivated in Carpinteria Valley about forty years ago, and after 1884 the growing

\*Some other states (including California) produce comparatively small quantities of the above crops.

extended. The bulk of the crop is raised in Ventura County; Orange, Santa Barbara, Los Angeles and San Diego counties being next in order. San Diego County, however, is increasing its acreage in lima beans very fast. Some of the best sections yield 40 to 45 sacks per acre. The average yield is 14 sacks of 80 pounds, or 1,120 pounds to the acre, but in the best sections 35 or even 40 sacks of 80 pounds to the acre have been raised.

In Ventura County the yield is not less than twenty 80-pound sacks to the acre, whereas 12 sacks is considered a good yield in Orange County. The commercial production of dried lima beans is practically confined to the southern coast district of California, very few being produced in other states. In October, owing to wet or damp weather, considerable damage was done in the southern districts to small white beans and lima beans, but the loss was more than made up in price, as the market at the beginning of the season ranged from \$4.25 to \$15.50 per 100 pounds later.

Beans are packed in sacks of varying weights, depending upon the varieties. Blackeyes are lighter than some others and are generally packed in sacks of from 75 to 80 pounds; pinks in sacks of 85 or 100 pounds; white beans in sacks of 90 or 100 pounds.

The other varieties of beans are grown mostly in the delta region of the Sacramento and San Joaquin rivers. The pink variety is grown generally in all the bean sections of California; the large white or Lady Washington in the Sacramento and San Joaquin River sections; the Blackeye is in reality a cowpea and is grown all over the state, but principally in the southern counties of Ventura, Riverside, Los Angeles, Orange, and San Diego; and they are also grown in the San Joaquin Valley. The bayo is not grown extensively, and is produced in a limited area of the choicest river bottom lands in the Sacramento and San Joaquin Valley sections; the small white, or navy bean, is a late variety and grown mostly in the coastal counties of Monterey, San Luis Obispo and Santa Barbara. Large quantities are shipped to Boston, where they are prepared as "Boston baked beans."

#### Castor Beans.

Castor beans were first grown in California over forty years ago, without profit, and until recently have never been profitable since that time. They are not edible, either by man or stock, their only use being for making oil, and hitherto there have been no mills in the state making castor oil. Between 1860 and 1900 the castor bean was an important crop in certain sections of Oklahoma, Kansas, Missouri and Illinois, but during recent years its culture has been practically abandoned. The decline of the industry in the United States is attributed to the growing importance of other crops and the reduction in prices brought about by importations of castor beans from India.

The yield will depend much upon cultural conditions, upon the season, and the care exercised in harvesting and threshing the seed. Yields of 30 to 40 bushels per acre have been reported from Florida, South Carolina, Georgia, Texas and California. In the Middle West yields of 15 to 25 bushels per acre have been reported under favorable conditions. Much smaller yields will of course result if conditions are unfavorable.

Until recently the farm price for castor beans has been not far from \$1.00 per bushel. The increased demand for castor oil due to war conditions has caused the price of the beans to advance rapidly, and it is probable that high prices for castor beans will prevail until the end of the war. The normal market requirement in the United States for castor beans is about 1,000,000 bushels annually, but until present conditions change materially, a larger quantity will be needed.

In the United States castor beans are used in quantity only by manufacturers of castor oil. The principal castor-oil mills are located at Jersey City, N. J., Buffalo, N. Y., Toledo, O., and Grand Rapids, Mich. In general, the equipment and operation of a castor-oil mill resembles that of a cottonseed-oil mill or linseed-oil mill, but special and expensive equipment is necessary for the proper extraction of the oil from the castor beans. The best grade of oil is obtained from the beans by hydraulic pressure.

In response to an appeal to raise castor beans during the war, California produced about 13,000 bushels of 46 pounds which were taken by the War Department at \$4.50 per bushel, it being required for airplanes.

#### Soy Beans.

North Carolina and Tennessee are the two leading states in the production of soy beans, but they are not yet grown in California. Soy beans, introduced into the United States more than a hundred years ago, primarily for use as a forage crop, are in reality one of the most nutritious of the legumes when used as human food, according to specialists of the United States Department of Agriculture. These beans have been used for centuries as a staple article of diet in China and Japan and are coming to be used more generally in this country as consumers learn their food value and palatability. Since they furnish protein, which contains nitrogen for muscle building, and valuable fat, they are especially important to turn to as an emergency addition to the usual dietary or as substitutes for other foods furnishing protein and fat. Moreover, the fact that they contain no starch makes them valuable for invalids who can not eat starchy foods. These beans may be grown easily in practically all sections of the country where corn is grown and give heavier yields than most other beans.

Soy beans have been so important for other purposes that until recently they have attracted little attention for food purposes in this country. They are now coming into their own for that purpose, however, and the acreage of soy beans has increased steadily in recent years. The dried beans may be purchased now in a number of markets in various parts of the country, often under the name of togo beans.

Where dried soy beans are available they may be baked with or without pork, like navy and other beans. They should be soaked overnight and should be cooked longer than other kinds of beans. The cooking may be done economically in a fireless cooker of the sort provided with heating stones or plates; or on the ledge of the fire box inside the furnace if the house happens to be heated with one of this type.

Dried soy beans have been canned in considerable quantities during the past season, baked with pork, and are on sale in this form in

numerous markets. Canned green soy beans, which may be compared with lima beans, also are on the market in some sections of the country. Both these canned products yield as high a proportion of energy and a higher proportion of protein than the canned beans with which they are most closely comparable, and so are more nourishing. Both are produced and handled usually at a lower cost than other beans and should, therefore, be obtainable at lower prices. They are not generally used as a human food in this country, although perfectly edible.

The amount of soy bean oil imported is as follows:

Year ending June 30	Pounds	Value
1914 -----	16,360,452	\$830,790
1915 -----	19,206,521	899,819
1916 -----	98,119,695	5,128,200
1917 -----	162,690,235	11,410,606
1918 -----	336,824,646	32,827,460

**Beans and Peas Produced, 1850-1910.†**

(From the Bureau of the Census.)

Year ending June 30	Beans, bushels	Peas, bushels
1850 -----	2,292	-----
1860 -----	165,574	-----
1870 -----	380,010	-----
1880 -----	378,971	40,806
1890 -----	713,480	32,364
1900 -----	658,515	57,299
1910 -----	3,323,608	57,468

†Beans and peas were reported as one product in 1850, 1860, and 1870.

The acreage in beans in 1910 was 157,825, producing beans of the value of \$6,292,955; the acreage in dry peas was 2,959, valued at \$101,016.

Beans have become one of the most important vegetable crops in the state.

In 1916 the market prices were the highest on record, ranging from \$4.25 at the beginning of the season to \$15.50 per hundred pounds. The average price on the entire crop was about \$7.50 to the grower, recleaned; in 1917 prices continued good, but later, in 1918, prices had a heavy fall and a large quantity remained unsold, the demand being small.

## California Beans, 1913-1918.

(Bags.)

Variety	1913	1914	1915	1916	1917	1918

1917 -----	3,747,993	12,137,048	2,164,943	10,427,742
1918 -----	4,145,625	12,137,048	1,517,458	9,096,559

For the production of dried beans and peas by counties, see page 136.

†In the exports dried peas are included in the total with beans.

The acreage in limas has increased about 5,000 acres over 1917; and on other varieties the acreage of 1918 exceeded that of 1917 by 25,000.

Threshing was delayed by the rain and damp weather, and very heavy damage was done in some sections; especially to small beans in the Salinas, San Joaquin and Sacramento valleys; and considerable damage was done to small whites in Santa Maria Valley.

There was also heavy damage done to lima beans on account of the continuous rainy spell during October, the beans not drying up sufficiently between spells to allow threshing to proceed, which caused a very heavy expense to growers. The rain also necessitated hand picking and a loss in some instances of as much as 25 per cent damaged beans.

Another trouble the lima bean growers had to contend with was the corn worms, which ate through the pod into the bean while in a green state.

The beans that have increased in production mostly are the Tepary and Baby lima. The Tepary is not popular with the trade in general, but the Baby lima is fast becoming a staple bean. This variety of bean heretofore has been used principally as a canned bean; but it now appears as if it is destined to be in good demand as a dried bean.

While beans are put up in many different size bags, the 1919 crop will be mostly put up in 100-pound weight bags, and it is only a matter of a few years until all beans will be put up in bags that will hold 100 pounds net, and of heavier burlap than the smaller bag is made of.

#### HOPS.\*

The leading states in the production of hops are California, Oregon, Washington and New York.

The total area devoted to the production of hops in California in 1909 was 8,391 acres, producing about 11,994,953 pounds of hops, valued at \$1,731,110. The climatic conditions and soil of California are more perfectly adapted to this crop than any other state in the Union, and its average production per acre is greater. The average production per acre in other hop-producing countries of the world has been estimated as follows: England, 905 pounds; Germany, 510 pounds; in the United States, 885 pounds, and in California, 1,469 pounds.

The cultivation of hops in California has increased rapidly, as shown by the following figures, but owing to the low prices several hundred acres were abandoned in 1915. The prices for 1916 opened at 12 cents to 15 cents, but few growers secured these figures, and prices fell to 5 cents to 8 cents, or less than cost of production. Because of adverse legislation and very low prices the hop growers in 1916 plowed out a good percentage of their hops and planted the land to more profitable crops. In 1917, 10,500 acres were planted to hops, which yielded a crop of 85,000 bales of 180 pounds net. This crop sold at prices ranging from 12 cents to 35 cents a pound, the average price in April, 1918, being about 17½ cents.

The leading counties in the production of hops in 1916 were:

County	Bales
Sacramento .....	72,000
Sonoma .....	30,000
Mendocino .....	16,000
Total .....	118,000

The estimated crop in Sonoma County in 1918 was 23,000 bales, and that for the whole state from 45,000 to 64,000 bales.

\*For further details regarding hops, see Report for 1913, pages 77-79.

**California Hop Crop, 1860-1910.**  
(From the Bureau of the Census.)

Year	Acres	Pounds
1860		80
1870		625,064
1880	1,119	1,444,077
1890	3,974	6,547,338
1900	6,890	10,124,660
1910	8,391	11,994,953

NOTE.—The acreage was not reported prior to 1880.

The average for 1918 would be about 25 cents, as the prices fluctuated from about 9 cents in September, 1918, to 38-40 cents in April, 1919. The highest and lowest prices per pound paid to growers during the last eleven years have been as follows:

Year	Highest, cents	Lowest, cents
1908	14	7
1909	25	12
1910	30	15
1911	45	25
1912	22	13
1913	26	13
1914	18	5
1915	14	7
1916	12	5
1917	12	35
1918	39	10

**California Hops, Imports and Exports, 1908-1918.**  
(Duty, 16 cents per pound.)

\*A bale averages from 185 to 190 pounds net, the variation depending upon the quality and the compression of the hops.

**SUGAR BEETS.**

As early as 1862 the legislature passed an act to encourage the manufacture of sugar, and offered premiums for the first 100 bags of 100 pounds each of sugar made from sugar cane, sugar beets or sorghum cane, \$500; for the following year \$250, and for the two succeeding years, \$150. As early as 1856 a small beet-sugar factory was built at

Ocean View, near San Francisco, which failed in a few years. In 1869 and 1870 a beet-sugar factory having a capacity of 50 tons was erected at Alvarado and was operated under the name of the California Beet Sugar Manufacturing Co. After operating four years it was sold to a concern in Santa Cruz County, which failed in 1876. The factory opened again for one year in 1880. About this time a new company was formed, which increased the capacity to 100 tons daily, but in 1886 the factory was partially destroyed by fire and the enterprise failed. In 1887 and 1888 the factory was rebuilt and sold to the Alameda Sugar Co. The plant was subsequently enlarged in 1890.

Other attempts to establish the beet-sugar industry were made at Brighton and Isleton, but these met with no success. In 1888 a plant was built at Watsonville with a 300-ton capacity. This was soon enlarged to 1,000 tons, but was later dismantled. In 1898 the Spreckels plant was erected at Spreckels, Cal., with a 3,000-ton capacity. This factory has become the largest in the United States. At the close of 1890 there were only three factories in the United States, two in California and one in Nebraska.

All the coast valleys of California are favorably situated, in respect to temperature, for the production of sugar beets, and the same may be said of certain lands in other parts of the state. In California there is a larger acreage that is well adapted to the growing of sugar beets than is found in any other state in the Union.

**California Sugar Crops, 1899 and 1909.**

(From the Reports of the Census.)

Product	Number of farms	Acres	Production		
			Amount	Unit	Value
Sugar beets—					
1899 .....	863	41,242	356,535	tons	\$1,550,346
1909* .....	1,113	78,957	845,191	tons	4,320,532
Sorghum cane—					
Total cane, 1899 .....					3,788
In 1899 cane grown .....	54	140	1,085	tons	
In 1899 cane sold as such .....			6	tons	10
In 1899 syrup made .....			8,671	gallons	3,778
Total cane, 1909 .....					14,826
In 1909 cane grown .....	48	647	3,021	tons	
In 1909 syrup made .....	8		4,330	gallons	2,340

\*Includes beets and cane used as forage.

The cultivation of the beet greatly improves the land. According to a university professor, the following was the average increase in ten years on one estate:

	Yield before beet culture (bushels) per acre	Yield after beet culture (bushels) per acre	Per cent increase because of beet culture
Wheat .....	24.5	41.3	68.6
Rye .....	28.4	40.8	43.7
Oats .....	61.8	75.3	21.8
Barley .....	23.2	43.5	87.5
Potatoes .....	218.6	238.0	8.97
Rape .....	23.2	48.8	110.0

The following table gives a complete list of beet sugar plants in California, with their names and the location of factories. It also shows the daily slicing capacity, expressed in tons of beets, for each factory.

**Beet Sugar Companies and Factories of California in 1918.**

The quantity of beet sugar produced in the state in 1916 was the largest in the history of the industry. The amount of beet sugar produced in the United States during the last five years shows a steady increase until 1916, when bad weather reduced the expected yield.

Beet Sugar Production in United States, 1911-1918.

Year	Number of factories	Acreage	Beets used, short tons	Sugar made, short tons
1911-----	66	473,877	5,062,333	599,500
1912-----	73	555,300	5,224,377	692,556
1913-----	71	580,006	5,659,462	733,401
1914-----	60	483,400	5,288,500	722,054
1915-----	67	624,000	6,462,000	874,220
1916-----	74	665,308	5,919,673	820,657
1917-----	91	664,797	5,625,545	765,207
1918-----	89	594,010	5,523,036	765,063

Payment for sugar beets is made to the growers according to the weight of the beets without tops. An estimated amount of tare on account of dirt, improperly topped beets, etc., is deducted from the gross weight of the topped beets as delivered by growers. For the past four years the value of the beet crop to growers has ranged from \$30,000,000, to \$44,192,000 in 1917, compared with \$38,139,000 in 1916.

Some time elapses between the delivery of the beets and their use in the factory. The harvesting season may close from six to eight weeks earlier than the end of the sugar-making season. During this period beets lose in weight by drying, which causes some loss to the growers.

Sorghum Syrup, 1860-1910.

Sorghum was first introduced into the United States in 1853. Tennessee, Missouri and Kentucky are the largest producers. The following table shows the production in California from 1860 to 1910:

Year	Gallons
1860-----	552
1870-----	333
1880-----	2,459
1890-----	1,670
1900-----	8,671
1910-----	4,330

## RICE.

If its importance as a food product is to be measured by the number of persons who consume it, rice must, without a doubt, be considered the greatest cereal, as it is more widely and generally used as a food material than any other. Half a century ago experiments were made in the cultivation of rice in California, but they were not successful. In 1860, small quantities were raised in Alameda, Tehama, San Mateo, Santa Cruz and Sonoma counties, but the total amount produced was only 2,140 pounds.

In 1862 the following premiums were offered by the legislature: For the first 1,000 pounds of rice, \$250; for the first 5,000 pounds, \$500; for the first 10,000 pounds, \$1,000; and the same sums for the first, second

and third succeeding years. The average per capita consumption of rice for food in this country is scarcely 6 pounds a year, and most of this is consumed in the Southern states. The high esteem in which rice is held in other countries is indicated by their per capita consumption. Norway and Sweden consume over 9 pounds per capita; Russia over 11 pounds; England, 27 pounds; France, 34 pounds; Italy, over 101 pounds, and Germany more than 93 pounds. But even these European countries do not begin to eat as much rice as Japan and China. There, rice is the most important article of diet. Each man, woman and child in Japan, on the average, consumes 147 pounds of rice each year, and those in China, 158 pounds.

The rice industry of California is of recent development. The investigations inaugurated by the Department of Agriculture in the spring of 1909, and continuing three seasons, furnished valuable data on the commercial possibilities of rice culture in California. These investigations were largely responsible for the beginning of the industry. The first commercial crop of rice in California was grown in 1912 on black adobe soil in the Sacramento Valley, near Biggs.

The successful introduction of this crop is dependent upon an abundant supply of water, which must always be available during the growing season. The soil area adapted to rice in this valley is sufficiently large to produce many times the 55,000,000 pounds of cleaned rice which are consumed each year on the Pacific coast. How much of this area has sufficient available water for proper irrigation is uncertain, though for a good portion of it there is apparently an abundant supply. Increase in the rice acreage should therefore be made with care.\*

Its culture has opened up a new industry for lands which have hitherto been deemed unfit for anything but wheat, on account of the adobe conditions of the soil. The time of harvest varies, according to the variety, from August to November. Of the varieties of rice grown in California in 1918, 96 per cent was Japanese, 1 per cent of Blue Rose and 2 per cent of Early Prolific and 1 per cent of other kinds.

Rice was grown successfully in the northern part of Kern County in 1912 as an experiment on heavily laden alkali land which had hitherto been regarded as practically worthless. From 15 acres 349 sacks, weighing from 100 to 110 pounds, were produced.

The following is the acreage of rice by counties in 1915 to 1917:

Rice Acreage by Counties, 1915.

Sacramento Valley	Acres	San Joaquin Valley	Acres
Butte County -----	15,200	San Joaquin County -----	150
Glenn County -----	500	Stanislaus County -----	200
Colusa County -----	8,750	Merced County -----	45
Yolo County -----	1,500	Fresno County -----	1,120
Yuba County -----	1,990	Tulare County -----	400
Shasta County -----	5	Kings County -----	300
Sutter County -----	850	Kern County -----	900
Solano County -----	180	Imperial County -----	10
		Ventura County -----	10
Total -----	28,975	Total -----	3,135

Total acreage in the state ----- 32,110

\*Report on Rice Growing, Circular No. 97, U. S. Department of Agriculture.

Rice Acreage by Counties, 1916.

Sacramento Valley	Acres	San Joaquin Valley	Acres
Butte County -----	21,000	San Joaquin County -----	100
Colusa County -----	16,100	Fresno County -----	280
Yolo County -----	12,600	Kern County -----	1,110
Glenn County -----	8,100	Tulare County -----	490
Yuba County -----	1,200	Kings County -----	410
Sutter County -----	2,600	Stanislaus County -----	810
Solano County -----	200	Total -----	65,000

Average yield per acre, 2,400 pounds; maximum, 5,000; minimum, 1,750 pounds. Price, average approximately, \$1.90 per hundred to growers.

Rice Acreage by Counties, 1917.

Sacramento Valley	Acres	San Joaquin Valley	Acres
Butte County, about -----	18,000	San Joaquin County -----	175
Yolo County -----	18,800	Stanislaus County -----	500
Glenn County -----	16,500	Fresno County -----	280
Colusa County -----	19,750	Kern County -----	875
Yuba County -----	4,700	Tulare County -----	350
Sutter County -----	730	Kings County -----	250
Solano County -----	200	Total -----	81,110
		Imperial County -----	200

Rice Acreage by Counties, 1918.

Location	Acres
Glenn County -----	38,675
Colusa County -----	31,450
Butte County -----	29,750
Yolo County -----	15,000
Sutter County -----	3,500
Yuba County -----	4,000
San Joaquin Valley -----	7,000
Total -----	129,375

The rice mills handle the complete process from the time the rice leaves the threshing machine on the field until it is packed in 2½-pound cotton bags ready for retail consumption, both in the polished and unpolished. The by-products such as bran and rice meal, are very nutritious for cattle and hog feed. Increased production and consumption of rice not only would expand a profitable industry, but the eating of more rice in the place of wheat would release a greater quantity of the bread grain for shipment to the allies.

Prices on the 1916 crop were quite low—lower than they were the year before by perhaps three-eighths of a cent—up until the rise that commenced about the first of March, after which prices advanced by leaps and bounds. With regard to the quality of the rice in 1916, compared with the previous year: there was a great deal of immature rice, much of this on account of the poor quality of seed sown by the farmer.

In 1917 the total yield of rice was about 2,500,000 bags of paddy or rough rice of 100 pounds per bag, the value of this paddy rice was about \$1,000,000. The price for paddy rice steadily advanced from about \$2.50 to \$3.00 per cwt. in November, 1917, to \$4.00 to \$4.50 per cwt. in March, 1918, and by April the stock was practically exhausted. Rice has been sold at over 5 cents, but this was for seed purposes.

The 1918 rice crop in California amounted to 3,500,000 bags of approximately 100 pounds each, an increase of about 1,000,000 bags over the production of 1917. Due to heavy rains during the period of harvesting an unusual amount of the crop was badly damaged.

Increase in production is to be credited to more extensive planting, but the average yield was lessened by the adverse climatic conditions noted.

During the past year the San Joaquin Valley doubled its acreage, 7,000 acres having been sown to rice in 1918. It may be said this section has emerged from the experimental stage and the popular cereal is now being grown on a commercial scale.

The construction and operation of three new mills in 1918, making a total of seventeen in the state, indicate the growth of the industry in California.

In this connection it is interesting to note the rapid increase in acreage since rice growing reached the commercial stage. This period may be said to have been reached in 1914, when 16,000 acres were planted. The following table gives the approximate acreage for the several succeeding years:

Year	Acres	Year	Acres
1915 -----	32,000	1917 -----	82,000
1916 -----	65,000	1918 -----	129,000
